MATHEMATICS **9709/23**

Paper 2 Pure Mathematics 2 **May/June 2024**

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [ ].

This document has **16** pages. Any blank pages are indicated.

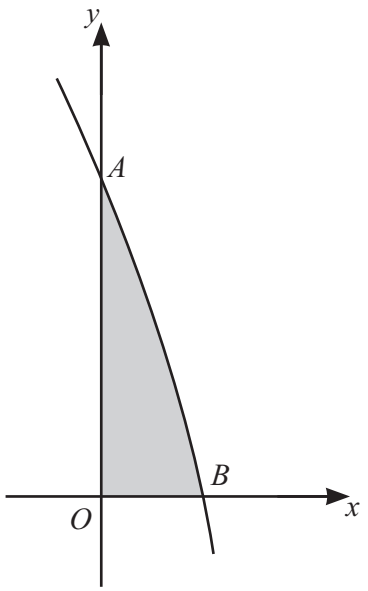
3



The diagram shows the curve with equation $y = 8e^{-x} - e^{2x}$. The curve crosses the y-axis at the point A and the x-axis at the point B. The shaded region is bounded by the curve and the two axes.

(a) Find the gradient of the curve at A. [3]

4 A curve is defined by the parametric equations

$$x = 4\cos^2 t, \qquad y = \sqrt{3}\sin 2t,$$

for values of t such that $0 < t < \frac{1}{2}\pi$.

Find the equation of the normal to the curve at the point for which $t = \frac{1}{6}\pi$. Give your answer in the form $ax + by + c = 0$ where a, b and c are integers. [7]

5 The polynomial $\mathrm{p}(x)$ is defined by $\mathrm{p}(x) = 9x^3 + 18x^2 + 5x + 4$.

(a) Find the quotient when $\mathrm{p}(x)$ is divided by $(3x+2)$, and show that the remainder is 6. [3]
