### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- Show all the steps in any calculations and state the units.

### Information

- The total mark for this paper is 120.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

**Pearson**

**Answer ALL questions.**

1 The diagram shows a food web on a farm.

(a) (i) How many trophic levels are shown in this food web?

(1)

(ii) Which organism in this food web is a primary consumer and also a secondary consumer?

(1)

(iii) Suggest why the farmer uses a pesticide to control the aphids.

(2)

2 A meal contains different food components.

(a) The table lists some of the components in the meal.

Complete the table by giving the function of each component.

One has been done for you.

(4)

Component	Function of component
vitamin A	
vitamin C	
vitamin D	bone growth
iron	
dietary fibre	

(b) Describe a test to show that the meal contains glucose.

(3)

(c) The meal also contains lipids and proteins.

(i) Give the three chemical elements found in lipids and also found in proteins. (1)

(ii) The table lists two substances involved in the digestion of lipids.

Complete the table by naming an organ that produces each substance. (2)

Substance	Organ
bile	
lipase

- (b) Krabbe disease is an inherited disease that affects the structure and function of motor neurones. The disease is caused by a recessive allele.

Two parents are heterozygous for Krabbe disease.

- (i) Draw a genetic diagram to show the genotypes of these parents, their gametes and their possible offspring.

Use D for the dominant allele and d for the recessive allele.

(3)

- (ii) Calculate the probability of these parents producing a male child with Krabbe disease.

(1)

probability = .....

- (iii) In the UK, the probability of being born with Krabbe disease is 0.00001

There are about 733 000 births per year in the UK.

Calculate the number of children born per year in the UK who are likely to have Krabbe disease.

Show your working.

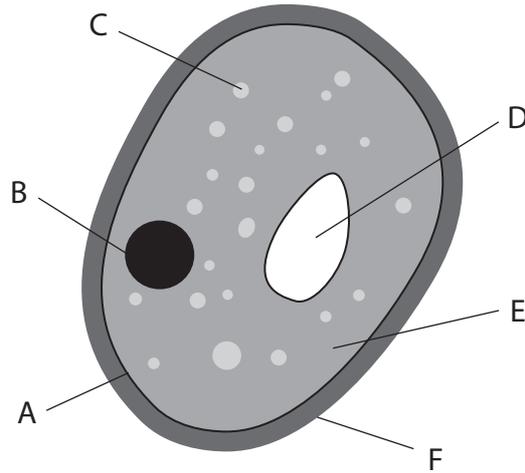

(2)

number = .....

**(Total for Question 4 = 14 marks)**

5 The diagram shows a yeast cell.

(a) (i) Give the letter of the part made of chitin.

(1)

(ii) Give the letter of the part made of glycogen.

(1)

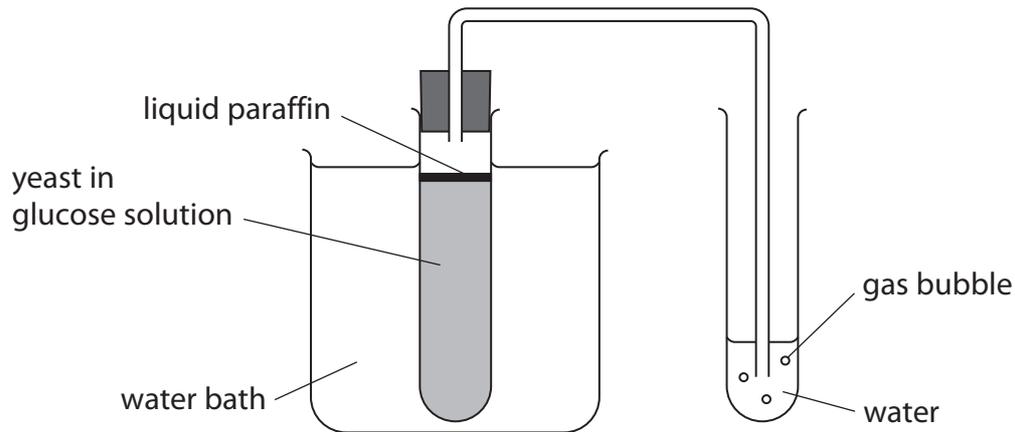

(b) Anaerobic respiration in yeast cells produces a gas.

Write the word equation for anaerobic respiration in yeast cells.

(2)

- (c) A student uses this apparatus to investigate the effect of temperature on anaerobic respiration in yeast.

The student uses the water bath to control the temperature of the yeast in glucose solution.

He measures the rate of anaerobic respiration by counting the number of gas bubbles produced in one minute.

The table shows the student's results.

Temperature of water bath in °C	Rate of anaerobic respiration in bubbles per minute
20	3
25	5
30	7
36	10
40	14
45	20
52	3

(b) Asthma is a disease that narrows the airways in the lungs.

A peak flow test is used to diagnose and monitor asthma.

The test measures how fast you can blow air out of your lungs.

The test involves blowing as hard as you can into a small device called a peak flow meter.

Blowing into the peak flow meter moves a slider along the measurement scale.

© 1999-2016 Masterfile Corporation

These instructions are provided to help measure peak flow.

- Step 1 Sit or stand still
- Step 2 Set the meter to zero, make sure your fingers are not touching the slider and that the meter is horizontal
- Step 3 Breathe in as deeply as you can, then breathe out as quickly and as hard as you can into the peak flow meter
- Step 4 Record the measurement when you have finished breathing out
- Step 5 Repeat the procedure three times

(i) Suggest the unit that is used to measure peak flow. (1)

(ii) Explain why the instructions in step 2 are necessary. (2)

.....

10 The passage describes hormones and coordination.

Complete the passage by writing a suitable word in each blank space.

(9)

Hormones are chemicals that are produced by endocrine .....

and are secreted into the ..... . The hormones are then

transported to target cells in another part of the body.

Males have testes that produce the sex hormone ..... that causes

body hair to grow. Females have ..... that produce the

sex hormones ..... and progesterone.

The pancreas produces hormones that regulate blood glucose. One of these hormones,

called ....., stimulates the conversion of blood glucose

to ..... in the .....

Another hormone causes the heart rate to increase in response to danger.

This hormone is called .....

**(Total for Question 10 = 9 marks)**

11 A student investigates the populations of two plant species in two fields, A and B.

The student uses a  $0.5\text{ m} \times 0.5\text{ m}$  quadrat to count the number of plants of each species in each field. He takes five quadrat samples for each field.

The tables show the student's results.

**Field A**

Plant species	Number of plants					Average	Average number per $\text{m}^2$
	quadrat 1	quadrat 2	quadrat 3	quadrat 4	quadrat 5		
plantain	0	2	0	2	0	0.8	3.2
clover	1	3	2	3	1	2.0	8.0

**Field B**

Plant species	Number of plants					Average	Average number per $\text{m}^2$
	quadrat 1	quadrat 2	quadrat 3	quadrat 4	quadrat 5		
plantain	5	2	3	7	2		
clover	5	3	6	3	0	3.4	13.6

(a) (i) Calculate the average (mean) number of plantain per  $\text{m}^2$  in field B.

Show your working.

(2)

average number of plantain per  $\text{m}^2$  = .....

(ii) Explain how the student should decide where to place the quadrats in each field.
