Wednesday 13 January 2021								
Afternoon (Time: 2 hours 30 minutes)					Paper Reference 4MB1/02			
Mathematics B								
Paper 2								
You must have: Ruler graduated in centimetres and millimetres, protractor, pair of compasses, pen, HB pencil, eraser, calculator. Tracing paper may be used.							Total Marks	

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- **Calculators may be used.**

Information

- The total mark for this paper is 100.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.
- Without sufficient working, correct answers may be awarded no marks.

2 The Earth is assumed to move around the Sun in a circular orbit of radius 1.5×10^8 km.

Assuming that the Earth takes 365 days to complete one orbit of the Sun,

calculate the average speed, in m/s to 3 significant figures, of the Earth as it orbits the Sun.

Diagram **NOT**
accurately drawn

Figure 1

Figure 1 shows circle $QRST$ with centre O .
 SQ is a diameter of the circle.

$$QR = 60 \text{ mm} \quad RS = 40 \text{ mm} \quad ST = 50 \text{ mm}$$

Without using a calculator, find the exact length, in mm, of QT .

Give your answer in the form $a\sqrt{b}$ where a is an integer and b is a prime number.
 Show your working clearly.

- 4 Over the course of a week of seven days, Alan plays a series of games. He plays exactly one game each day.

On Sunday, the probability that Alan wins his game is $\frac{1}{2}$

On a day other than Sunday, the probability that Alan wins his game is $\frac{1}{3}$

The incomplete probability tree diagram below is to give information about Alan's result on a randomly chosen day in a week of seven days.

- (a) Complete the probability tree diagram below.

- (b) Find the expected number of games Alan will win in a week of seven days.

(Total for Question 4 is 5 marks)

5 \mathcal{E} is the universal set and A , B and C are three sets.

Here is information about these sets.

$$n(A) = 45$$

$$n(B) = 48$$

$$n(C) = 55$$

$$n(A \cap B) = 24$$

$$n(A \cap C) = 25$$

$$n(B \cap C) = 27$$

$$n(A \cap B \cap C) = x \quad n(A' \cap B' \cap C') = y$$

(a) Show all this information on the Venn diagram, giving the number of elements in each appropriate subset, in terms of x or y .

(3)

Given that $n(\mathcal{E}) = 100$

(b) find an expression for y in terms of x .
Give your answer in its simplest form.

(2)

(c) Using your Venn diagram and your answer to part (b), find the greatest possible value of x .
Give reasons for your answer.

(3)

An element is selected at random from the 100 elements in the universal set.

(d) Find the probability that this element is in the set $(B \cap C') \cup (B' \cap C)$.

Diagram NOT
accurately drawn

Figure 3

Figure 3 shows the triangle OAB where $\vec{OA} = 12\mathbf{a}$ and $\vec{OB} = 6\mathbf{b}$
 M is the midpoint of OA and N is the midpoint of AB .

The point P on BM is such that $BP : PM = 2 : 1$

(a) Simplifying your answer, find, in terms of \mathbf{a} and \mathbf{b}

(i) \vec{BM} (ii) \vec{OP}

(3)

(b) Hence show that O , P and N are collinear.

(4)

Given that $|\mathbf{a}| = |\mathbf{b}| = 1 \text{ cm}$ and that $\angle AOB = 70^\circ$

(c) find the length, in cm to 3 significant figures, of OP .

(3)

[Cosine rule: $a^2 = b^2 + c^2 - 2bc \cos A$]

(Total for Question 11 is 13 marks)

12 Indre buys 1000 Hungarian dolls in Budapest to sell in Austria.
She pays in Hungarian forints.

Indre pays 1900 forints for each small doll she buys.
She pays 10 300 forints for each large doll she buys.

The number of small dolls that Indre buys is 4 times the number of large dolls that she buys.

(a) Calculate the total cost, in forints, of the 1000 dolls that Indre buys. (3)

Indre has to pay 100 euros to transport the dolls from Hungary so that she can sell them in Austria.

Initially the price of each small doll that Indre sells is 8 euros and the price of each large doll that Indre sells is 40 euros.

She sells 80% of the small dolls and $\frac{7}{8}$ of the large dolls at these prices.

Indre then reduces the price of each of her remaining dolls by 40%
She sells all of the remaining dolls.

When Indre bought the dolls, the exchange rate was 1 euro = 327.6 forints.

(b) Calculate the total profit, in euros to 2 decimal places, that Indre made by selling all 1000 dolls. (8)

(c) (i) Calculate the percentage profit, to 3 significant figures, that Indre made. (2)

(ii) State how the percentage profit in part (c) (i) would be affected if the total profit calculated in part (b) had been in forints. (1)
