Wednesday 22 May 2019	
Afternoon (Time: 2 hours)	Paper Reference 4PH1/1P 4SD0/1P
<p style="font-size: 24px; margin: 0;">Physics</p> <p style="margin: 0;">Unit: 4PH1</p> <p style="margin: 0;">Science (Double Award) 4SD0</p> <p style="margin: 0;">Paper: 1P</p>	
<p>You must have:</p> <p>Calculator, ruler, protractor</p>	Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- Show all the steps in any calculations and state the units.
- Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Information

- The total mark for this paper is 110.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

FORMULAE

You may find the following formulae useful.

$$\text{energy transferred} = \text{current} \times \text{voltage} \times \text{time}$$

$$E = I \times V \times t$$

$$\text{frequency} = \frac{1}{\text{time period}}$$

$$f = \frac{1}{T}$$

$$\text{power} = \frac{\text{work done}}{\text{time taken}}$$

$$P = \frac{W}{t}$$

$$\text{power} = \frac{\text{energy transferred}}{\text{time taken}}$$

$$P = \frac{W}{t}$$

$$\text{orbital speed} = \frac{2\pi \times \text{orbital radius}}{\text{time period}}$$

$$v = \frac{2 \times \pi \times r}{T}$$

$$(\text{final speed})^2 = (\text{initial speed})^2 + (2 \times \text{acceleration} \times \text{distance moved})$$

$$v^2 = u^2 + (2 \times a \times s)$$

$$\text{pressure} \times \text{volume} = \text{constant}$$

$$p_1 \times V_1 = p_2 \times V_2$$

$$\frac{\text{pressure}}{\text{temperature}} = \text{constant}$$

$$\frac{p_1}{T_1} = \frac{p_2}{T_2}$$

Where necessary, assume the acceleration of free fall, $g = 10 \text{ m/s}^2$.

Answer ALL questions.

1 This question is about waves.

(a) (i) Which of these waves is longitudinal?

(1)

- A** infrared
- B** radio
- C** sound
- D** ultraviolet

(ii) Draw a straight line linking each electromagnetic wave to its correct hazard.

(2)

Electromagnetic wave

Hazard

<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;">microwave</div>	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;">skin burns</div>

4 A car driver sees a hazard on the road ahead.

The graph shows the velocity of the car from when the driver sees the hazard.

(a) (i) Use the graph to determine the reaction time of the driver. (1)

reaction time = s

(ii) Calculate the stopping distance of the car. (4)

stopping distance = m

(iii) Calculate the acceleration of the car when the car is braking. (3)

acceleration = m/s²

5 This question is about stretching a spring.

- (a) The graph shows how the extension of a spring varies when a force is applied to the spring. The line on the graph shows that the spring has been extended past its elastic limit. The line has a straight section and a curved section.

- (i) Draw a cross on the line to show the elastic limit of the spring. (1)
- (ii) Sketch another line to show how the extension will change when the force is decreased from its maximum value back to 0. (2)
- (b) (i) State which energy store of the spring increases when it is stretched. Assume the spring does not reach its elastic limit. (1)

- (ii) How is this energy transferred to the spring? (1)

- A electrically
- B by heating
- C mechanically
- D by radiation

(b) The student extends the investigation by recording additional data for the lamp.

This is her method.

For each voltage

- switch the current on for 45 seconds
- record the current and colour of the lamp
- calculate the power and the energy transferred by the lamp

The table shows the student's results.

Voltage in V	Current	Power in W	Energy in J	Colour of lamp
0.0	0.00	0.0	0.0	off
2.0	0.40	0.8	36	red
4.0	0.90	3.6		orange
6.0	1.60	9.6	430	yellow
8.0	2.80	22.4	1000	white

(i) State the unit for current.

(1)

(ii) Calculate the missing value of energy for the voltage of 4.0 V.

Give your answer to 2 significant figures.

(2)

energy = J

(iii) The colour of a star is related to its surface temperature.

The Sun is yellow.

Use the student's results to identify a colour for a star that is cooler than the Sun.

7 This question is about refraction.

(a) State what is meant by the term **refraction**.

(1)

(b) The diagram shows a ray of light from a torch incident on the surface of a pool of water.

The angle of refraction of the ray of light is 33°

(i) Draw the path of the ray of light in the water.

(2)

(ii) State the formula linking refractive index, angle of incidence and angle of refraction.

(1)

(iii) Show that the refractive index of water is about 1.3

(2)

DO NOT WRITE IN THIS AREA

(c) The torch is moved below the surface of the water. Light from the torch is incident on the water surface at an angle greater than the critical angle.

(i) Explain the meaning of the term **critical angle**.

You may draw a diagram to help your answer.

(2)

(ii) State the formula linking critical angle and refractive index.

(1)

(iii) Calculate the critical angle of water.

Assume the refractive index of water is 1.3

(3)

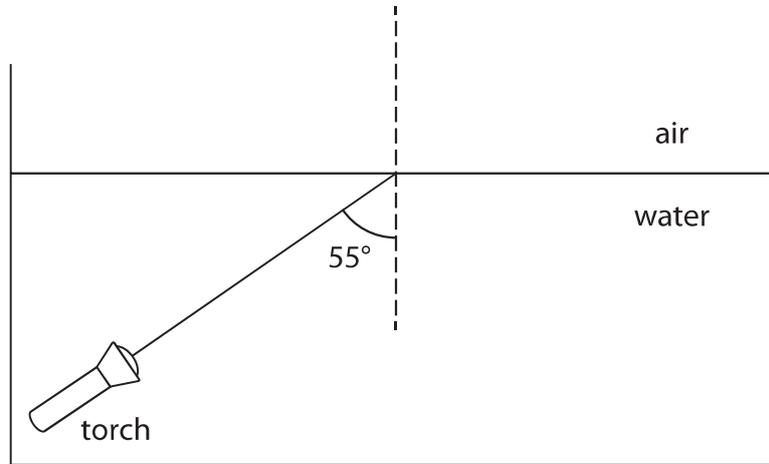

critical angle =^o

(iv) A ray of light leaves the torch as shown in the diagram.

Complete the path of the ray of light.

11 The diagram shows a manometer, a device used for measuring differences in pressure.

(a) One side of the manometer has some trapped gas. The other side is left open to the atmosphere.

The difference in pressure can be calculated using this formula.

$$[\text{difference in pressure} = \text{height} \times \text{density} \times 10]$$

The density of the liquid is $1.3 \times 10^4 \text{ kg/m}^3$.

The difference in the levels of the liquid is 3.8 cm.

Calculate the difference in pressure between the atmosphere and the trapped gas.

(3)

difference in pressure = Pa
