Paper 3 Structured Questions

October/November 2017

MARK SCHEME

Maximum Mark: 150

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2017 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

Surplus of income over expenditure	<u>2 901</u>	(1)OF																					
Accumulated fund at 31 March 2017	<u>43 515</u>	(1)OF																					
1(d)	The club will receive one-off payments from members, however in accordance with the matching concept, this should not be credited in full to the income and expenditure account as it is not earned in the period received. The income should therefore be spread over an appropriate period to match funds received with the benefits provided to members. The payments received will be represented as a credit in the statement of financial position as deferred income. The club should transfer amounts to the income and expenditure account from the deferred income account in equal instalments over a period it can determine as reasonable. This may depend on the profile of the members and expected use, but should not be for a lengthy period of time. As the lifetime fee is \$400 and the normal annual membership is \$50, it might seem appropriate to transfer the amounts in equal instalments over 8 years. (1 mark) for each valid point to a max of 4 marks.	4																					

Question	Answer	Marks
1(e)	Investment at fixed interest rate – annual income \$2625. (1) Build a boat-house – annual rental income \$1250, rent saved on old premises \$2 800, total extra income \$4050 (2) However, if the investment at fixed interest rate is chosen, after 3 years the funds will be available for other investments which may be more attractive. Building a property is a long term commitment which cannot be changed and may incur other costs, such as maintenance. On purely financial grounds, the club should use the funds to build the new boat-house. (3 marks for calculations, 3 marks for reasons, 1 for recommendation).	7

Question	Answer	Marks
4(d)	EPS 1 For current year profit after tax / number of ordinary shares $138\,700 / 640\,000 = \\$0.2167$ \$(0.22) (1)OF 2 Assuming profits similar amount to previous years $138\,700 / 400\,000 = \\$0.347$ (1)OF so shareholder is correct (1) that EPS has fallen, as there has not been a corresponding increase in profit to the level of increase in the number of shares. (1) If profits increase by 20% in the next year $166\,440 / 640\,000 = \\$0.26006$ (1)OF. EPS will increase but will still not reach the level it was before the rights issue. (1) Any future issue of ordinary shares will decrease EPS further, unless there is a significant increase in profits (1). Profits have to reach \$222 080 to achieve an EPS of \$0.347 with the current amount of shares (1). Max 4 marks on rights issue. A loan will be a long term liability (1) which will affect cash and profits. Cash will be reduced as the loan and interest is repaid (1) and profits will be reduced by the interest. (1) Gearing will also increase as long term liabilities increase. (1) The higher the rate of interest, the lower profits will be and so EPS will reduce. (1) Max 4 marks on loans. Recommendation based on the above comments. (1)	9

Operating expenses \$43 000 – (\$84 000 / 60) = \$42 200						

Question	Answer	Marks																																								
6(c)	Responses may include: Cash flow not bad, i.e. has net operating cash inflow; cash received from customers \$994 560 (\$63 040 + \$196 864 + \$364 032 + \$370 624) is greater than operating cash outflows \$908 800 (\$360 000 + \$240 000 + \$140 000 + \$42 200 · 4) Cash deficit in May and June, should plan ahead. Sales not evenly distributed, i.e. seasonal trade, and this will affect the regularity of cash inflow. Not many trade receivables take the advantage of cash discount, Luke may consider to increase the cash discount. More than 50% of trade receivables pay 2 months after sale, Luke should consider to tighten its credit policy. Maybe the business is a new business and Luke has only one supplier. It appears that Luke does not have much bargaining power, as he has to pay within one month following the purchases and is not allowed any cash discount. Keeping too much inventory may have negative impact on cash flow. Accept other valid responses. (1 mark) for each valid point.	6
