Paper 1 Further Pure Mathematics 1

**May/June 2023**

**2 hours**

You must answer on the question paper.

You will need: List of formulae (MF19)

## INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

## INFORMATION

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [ ].

This document has **20** pages. Any blank pages are indicated.

2 The cubic equation  $x^3 + 4x^2 + 6x + 1 = 0$  has roots  $\alpha, \beta, \gamma$ .

(a) Find the value of  $\alpha^2 + \beta^2 + \gamma^2$ . [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) Use standard results from the list of formulae (MF19) to show that

$$\sum_{r=1}^n ((\alpha + r)^2 + (\beta + r)^2 + (\gamma + r)^2) = n(n^2 + an + b),$$

where  $a$  and  $b$  are constants to be determined. [6]
