Paper 6 Probability & Statistics 2

February/March 2022**1 hour 15 minutes**

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **12** pages.

1 The lengths, in millimetres, of a random sample of 12 rods made by a certain machine are as follows.

200	201	198	202	200	199	199	201	197	202	200	199
-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

(a) Find unbiased estimates of the population mean and variance. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) Give a statistical reason why these estimates may not be reliable. [1]

.....

- 2 Harry has a five-sided spinner with sectors coloured blue, green, red, yellow and black. Harry thinks the spinner may be biased. He plans to carry out a hypothesis test with the following hypotheses.

$H_0: P(\text{the spinner lands on blue}) = \frac{1}{5}$

$H_1: P(\text{the spinner lands on blue}) \neq \frac{1}{5}$

Harry spins the spinner 300 times. It lands on blue on 45 spins.

Use a suitable approximation to carry out Harry’s test at the 5% significance level. [5]

[5]

[illegible]

- 4** In the past the time, in minutes, taken by students to complete a certain challenge had mean 25.5 and standard deviation 5.2. A new challenge is devised and it is expected that students will take, on average, less than 25.5 minutes to complete this challenge. A random sample of 40 students is chosen and their mean time for the new challenge is found to be 23.7 minutes.

- (a)** Assuming that the standard deviation of the time for the new challenge is 5.2 minutes, test at the 1% significance level whether the population mean time for the new challenge is less than 25.5 minutes. [5]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (b)** State, with a reason, whether it is possible that a Type I error was made in the test in part (a). [1]

.....

.....

.....

.....

.....

- 5 The heights of buildings in a large city are normally distributed with mean 18.3 m and standard deviation 2.5 m.
- (a) Find the probability that the total height of 5 randomly chosen buildings in the city is more than 95 m. [4]

This image shows a full page of white paper with horizontal dotted lines. The lines are evenly spaced and run across the width of the page, providing a guide for handwriting practice. There are no margins, text, or other markings on the page.

8

- 6** In a game a ball is rolled down a slope and along a track until it stops. The distance, in metres, travelled by the ball is modelled by the random variable X with probability density function

$$f(x) = \begin{cases} -k(x-1)(x-3) & 1 \leq x \leq 3, \\ 0 & \text{otherwise,} \end{cases}$$

where k is a constant.

- (a)** Without calculation, explain why $E(X) = 2$. [1]

.....

.....

.....

.....

.....

.....

- (b)** Show that $k = \frac{3}{4}$. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(c) Find $\text{Var}(X)$.

[3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

One turn consists of rolling the ball 3 times and noting the largest value of X obtained. If this largest value is greater than 2.5, the player scores a point.

(d) Find the probability that on a particular turn the player scores a point.

[4]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- 7 (a) Two ponds, A and B , each contain a large number of fish. It is known that 2.4% of fish in pond A are carp and 1.8% of fish in pond B are carp. Random samples of 50 fish from pond A and 60 fish from pond B are selected.

Use appropriate Poisson approximations to find the following probabilities.

- (i) The samples contain at least 2 carp from pond A and at least 2 carp from pond B . [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (ii) The samples contain at least 4 carp altogether. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (b) The random variables X and Y have the distributions $\text{Po}(\lambda)$ and $\text{Po}(\mu)$ respectively. It is given that
- $P(X = 0) = [P(Y = 0)]^2$,
 - $P(X = 2) = k[P(Y = 1)]^2$, where k is a non-zero constant.

Find the value of k . [4]
