**MATHEMATICS** **9709/33**

Paper 3 Pure Mathematics 3 **May/June 2024**

**1 hour 50 minutes**

You must answer on the question paper.

You will need: List of formulae (MF19)

**INSTRUCTIONS**

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

**INFORMATION**

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [ ].

This document has **20** pages. Any blank pages are indicated.

**3** The square roots of $24-7\mathrm{i}$ can be expressed in the Cartesian form $x+\mathrm{i}y$, where $x$ and $y$ are real and exact.

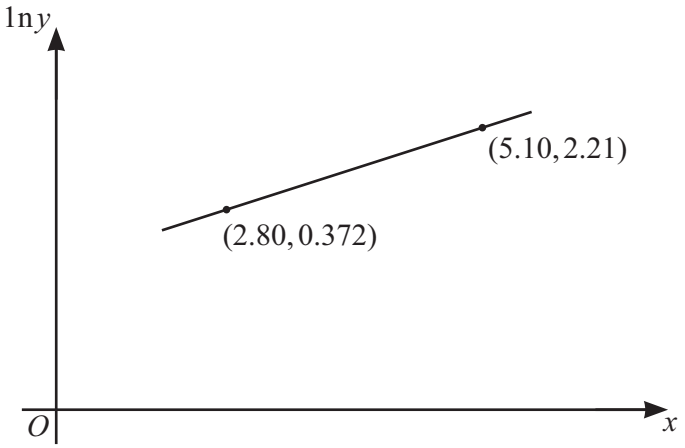

By first forming a quartic equation in $x$ or $y$, find the square roots of $24-7\mathrm{i}$ in exact Cartesian form. [5]

**4**

The variables $x$ and $y$ satisfy the equation $ky = e^{cx}$, where $k$ and $c$ are constants. The graph of $\ln y$ against $x$ is a straight line passing through the points $(2.80, 0.372)$ and $(5.10, 2.21)$, as shown in the diagram.

Find the values of $k$ and $c$. Give each value correct to 2 significant figures. [4]

**(b)** Hence find the exact value of $\int_0^{\frac{1}{12}\pi} \frac{3}{\left(3\cos 2x - \sqrt{3}\sin 2x\right)^2}\,\mathrm{d}x$, simplifying your answer. [5]

GradeMax

**9**

A container in the shape of a cuboid has a square base of side $x$ and a height of $(10-x)$. It is given that $x$ varies with time, $t$, where $t > 0$. The container decreases in volume at a rate which is inversely proportional to $t$.

When $t = \frac{1}{10}$, $x = \frac{1}{2}$ and the rate of decrease of $x$ is $\frac{20}{37}$.

**(a)** Show that $x$ and $t$ satisfy the differential equation

$$\frac{\mathrm{d}x}{\mathrm{d}t} = \frac{-1}{2t\left(20x - 3x^2\right)}. \qquad [5]$$
