Paper 5 Investigation (Core)

May/June 2024

1 hour 10 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You should use a graphic display calculator where appropriate.
- You may use tracing paper.
- You must show all necessary working clearly, including sketches, to gain full marks for correct methods.
- In this paper you will be awarded marks for providing full reasons, examples and steps in your working to communicate your mathematics clearly and precisely.

INFORMATION

- The total mark for this paper is 36.
- The number of marks for each question or part question is shown in brackets [].

This document has 8 pages. Any blank pages are indicated.

Answer **all** the questions.

INVESTIGATION

INTEGER TREES

This investigation looks at patterns when integers are arranged in the shape of a tree.
A tree uses consecutive integers starting with 1 at the top.
Each tree has a *trunk*, *branches* and *leaves*.
The integers always increase going away from the trunk, on both the right and the left.
The first branch is always on the right.

This tree uses the integers 1 to 6.
It has 2 branches with 2 leaves on each branch.

This tree uses the integers 1 to 12.
It has 4 branches with 2 leaves on each branch.
The leaves furthest from the trunk are the *outer leaves*.

A is the sum of the left outer leaves.
 B is the sum of the right outer leaves.
 T is the sum of the integers in the trunk.

Example

For the tree with 4 branches,

$$A = 6 + 12 = 18$$
$$B = 3 + 9 = 12$$
$$T = 1 + 4 + 7 + 10 = 22.$$

In **Questions 1 to 5**, the number of branches, n , is always even.

1 This tree has 6 branches with 2 leaves on each branch.

(a) Complete the calculation for A .

$A = 6 + 12 + 18 = \dots\dots\dots$ [1]

(b) Find the value of B .

$\dots\dots\dots$ [2]

(c) Find the value of T .

$\dots\dots\dots$ [2]

2 (a) Complete the table for trees with 2 leaves on each branch.
Use your answers to **Question 1** to help you.

Number of branches (n)	A	B	T	$A - B$	$A + B - T$
2	6	3	5	3	4
4	18	12	22	6	8
6				9	
8	60				16

[4]

(b) (i) Use values from the table to give an example to show that $A - B = 1.5n$.

$\dots\dots\dots$ [1]

(ii) Write an expression for $A + B - T$ in terms of n .

$\dots\dots\dots$ [1]

4

3 In this question trees have 3 leaves on each branch.
This tree has 6 branches.

(a) Complete the table.

Number of branches (n)	A	B	T	$A - B$	$A + B - T$
2	8	4	6	4	6
4	24	16	28	8	12
6			66		18
8	80				

[4]

(b) (i) Write an expression for $A - B$ in terms of n .

..... [1]

(ii) Write an expression for $A + B - T$ in terms of n .

..... [1]

- 4 In this question trees have 4 leaves on each branch.
The table shows values of $A - B$ and $A + B - T$.

Complete the last row of the table with expressions in terms of n .

Number of branches (n)	$A - B$	$A + B - T$
2	5	8
4	10	16
6	15	24
8	20	32
n		

[2]

- 5 (a) Complete the table.
Use your answers from Questions 2(b)(ii), 3(b) and 4 to help you.

Number of branches	Number of leaves on each branch (x)	$A - B$	$A + B - T$
n	2	$1.5n$	
n	3		
n	4		
n	5		

[2]

- (b) A tree has an even number of branches, n , with x leaves on each branch.

Complete the expressions for $A - B$ and $A + B - T$ in terms of n and x .

$A - B = \frac{n}{2} (\dots\dots\dots)$

$A + B - T = \dots\dots\dots$ [2]

- (c) A tree has 16 branches and 7 leaves on each branch.

Show that $A - B = 64$ and $A + B - T = 112$.

[2]

* 0019655401106 *

6

- 6 In this question trees have an **odd** number of branches.
Trees have more than one branch.

This tree has 5 branches with 2 leaves on each branch.

- (a) Find the value of $A - B$ and the value of $A + B - T$ for this tree.

$$A - B = \dots\dots\dots$$

$$A + B - T = \dots\dots\dots [4]$$

- (b) Show that your expression for $A - B$ in **Question 5(b)** does not give the correct value for this tree.

[2]

- (c) Show that your expression for $A + B - T$ in **Question 5(b)** gives the correct value for this tree.

7

- (d) There are different trees with odd numbers of branches where $A + B - T = 18$.

Find the number of branches and the number of leaves on each branch for all of these trees.
