### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*

### Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- Questions labelled with an **asterisk** (\*) are ones where the quality of your written communication will be assessed – *you should take particular care with your spelling, punctuation and grammar, as well as the clarity of expression, on these questions.*
- A Periodic Table is printed on the back cover of this paper.

### Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

## SECTION A

Answer ALL the questions in this section. You should aim to spend no more than 20 minutes on this section. For each question, select one answer from A to D and put a cross in the box . If you change your mind, put a line through the box  and then mark your new answer with a cross .

- 1 Which row in the table shows the number of protons, neutrons and electrons in a fluoride ion, F<sup>-</sup>?

Use the Periodic Table as a source of data.

	Protons	Neutrons	Electrons
<input type="checkbox"/> A	8	9	9
<input type="checkbox"/> B	9	9	10
<input type="checkbox"/> C	9	10	9
<input type="checkbox"/> D	9	10	10

(Total for Question 1 = 1 mark)

- 2 A sample of oxygen contains the isotopes <sup>16</sup>O, <sup>17</sup>O, <sup>18</sup>O.

How many peaks would there be for the O<sub>2</sub><sup>+</sup> ions in the mass spectrum of this sample of oxygen?

- A 3  
 B 5  
 C 6  
 D 9

(Total for Question 2 = 1 mark)

- 3 2000 g of a solution contains 0.015 g of solute.

In the solution, the concentration of the solute in parts per million (ppm) is

- A 3.0  
 B 7.5  
 C 30  
 D 75

(Total for Question 3 = 1 mark)

DO NOT WRITE IN THIS AREA

4 What is the concentration, in  $\text{mol dm}^{-3}$ , of a solution of 10.6 g of sodium carbonate,  $\text{Na}_2\text{CO}_3$ , in  $250 \text{ cm}^3$  of solution?

- A 0.40  
 B 0.25  
 C 0.10  
 D 0.025

(Total for Question 4 = 1 mark)

5 An enthalpy level diagram for a reaction is

Which row in the table shows the correct terms for X and Y and the enthalpy change for this reaction?

	X	Y	Enthalpy change
<input type="checkbox"/> A	products	reactants	endothermic
<input type="checkbox"/> B	products	reactants	exothermic
<input type="checkbox"/> C	reactants	products	endothermic
<input type="checkbox"/> D	reactants	products	exothermic

(Total for Question 5 = 1 mark)

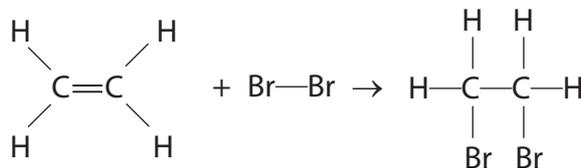

Use this space for any rough working. Anything you write in this space will gain no credit.

6 The table shows the mean bond enthalpies for some covalent bonds.

Covalent bond	C—C	C=C	Br—Br	C—Br	C—H
Mean bond enthalpy / kJ mol <sup>-1</sup>	347	612	193	290	413

What is the approximate enthalpy change, in kJ mol<sup>-1</sup>, for the reaction shown?

- A -225
- B -122
- C +122
- D +225

(Total for Question 6 = 1 mark)

7 The first six ionization energies, in kJ mol<sup>-1</sup>, of an element are

1086, 2353, 4621, 6223, 37832, 47278

In which group of the Periodic Table is this element?

- A 2
- B 3
- C 4
- D 5

(Total for Question 7 = 1 mark)

Use this space for rough working. Anything you write in this space will gain no credit.

- 8 Each diagram shows the trend in the ionic radius for four sequences of ions. The diagrams are not to scale.

- (a) Which diagram shows the trend in the ionic radius for the sequence  $\text{Li}^+$ ,  $\text{Na}^+$ ,  $\text{K}^+$ ,  $\text{Rb}^+$ ?

(1)

- A
- B
- C
- D

- (b) Which diagram shows the trend in the ionic radius for the sequence  $\text{Na}^+$ ,  $\text{Mg}^{2+}$ ,  $\text{Al}^{3+}$ ,  $\text{Si}^{4+}$ ?

(1)

- A
- B
- C
- D

(Total for Question 8 = 2 marks)

9 Some energy changes involved in a Born-Haber cycle are

- A electron affinity
- B lattice energy
- C standard enthalpy change of atomization
- D standard enthalpy change of formation

(a) Which enthalpy or energy change is represented by **p**?

- A
- B
- C
- D

(b) Which enthalpy or energy change is represented by **q**?

- A
- B
- C
- D

(c) Which enthalpy or energy change is represented by **r**?

- A
- B
- C
- D

- 10 The diagram, which is not drawn to scale, shows the Born-Haber cycle for potassium chloride. The energy changes given are in  $\text{kJ mol}^{-1}$ .

What is the value for **W**, in  $\text{kJ mol}^{-1}$ ?

- A -956
- B -82
- C +82
- D +956

(Total for Question 10 = 1 mark)

Use this space for rough working. Anything you write in this space will gain no credit.

- 11 Which row in the table shows the lattice energies, in  $\text{kJ mol}^{-1}$ , of calcium fluoride, potassium fluoride and potassium iodide?

	Calcium fluoride	Potassium fluoride	Potassium iodide
<input type="checkbox"/> A	-2630	-817	-651
<input type="checkbox"/> B	-2630	-651	-817
<input type="checkbox"/> C	-651	-817	-2630
<input type="checkbox"/> D	-817	-2630	-651

(Total for Question 11 = 1 mark)

- 12 The experimental value for the lattice energy of beryllium iodide is  $-2800 \text{ kJ mol}^{-1}$  and the theoretical value is  $-2653 \text{ kJ mol}^{-1}$ .

The best explanation for the difference is that the

- A beryllium ion is large and polarizes the iodide ion.  
 B beryllium ion is small and polarizes the iodide ion.  
 C iodide ion is large and polarizes the beryllium ion.  
 D iodide ion is small and polarizes the beryllium ion.

(Total for Question 12 = 1 mark)

- 13 Carbon (diamond) and oxygen both form covalent bonds between their atoms in the element.

What is the **best** reason for the fact that diamond has a much higher melting temperature than oxygen?

- A Diamond is a solid but oxygen is a gas at room temperature.  
 B Diamond has a giant atomic structure but oxygen has a simple molecular structure.  
 C The covalent bonds between carbon atoms in diamond are stronger than those between oxygen atoms.  
 D There is a single covalent bond between carbon atoms in diamond but a double covalent bond between oxygen atoms.

(Total for Question 13 = 1 mark)

14 The bonding in solid ammonium chloride is

- A ionic only.
- B ionic and covalent only.
- C ionic and dative covalent only.
- D ionic, covalent and dative covalent only.

(Total for Question 14 = 1 mark)

15 One of the isomers with the formula  $C_4H_8$  is

Possible names for this isomer are

- A *cis*-but-2-ene and *E*-but-2-ene.
- B *cis*-but-2-ene and *Z*-but-2-ene.
- C *trans*-but-2-ene and *E*-but-2-ene.
- D *trans*-but-2-ene and *Z*-but-2-ene.

(Total for Question 15 = 1 mark)

16 An electrophile is a species that

- A can accept a pair of electrons to form a covalent bond.
- B can donate a pair of electrons to form a covalent bond.
- C always has a negative charge.
- D always has a positive charge.

(Total for Question 16 = 1 mark)

Use this space for rough working. Anything you write in this space will gain no credit.

**17** Alkenes react with hydrogen gas in the presence of a nickel catalyst.

0.2 mol of an alkene reacted completely with 19.2 dm<sup>3</sup> of hydrogen gas at room temperature and pressure.

How many C=C bonds are there in a molecule of this alkene?

[The molar volume of a gas is 24.0 dm<sup>3</sup> mol<sup>-1</sup> at room temperature and pressure]

- A** 4
- B** 3
- C** 2
- D** 1

## SECTION B

Answer ALL the questions. Write your answers in the spaces provided.

18 (a) The relative atomic masses of elements can be determined using a mass spectrometer.

(i) Define the term **relative atomic mass**.

(3)

.....

.....

.....

.....

.....

.....

.....

(ii) Describe fully how positive ions are formed from gaseous atoms in a mass spectrometer.

(2)

.....

.....

.....

.....

.....

.....

.....

(iii) The following data were obtained from the mass spectrum of a sample of strontium.

Mass / charge ratio	% abundance
84.0	0.56
86.0	9.86
87.0	7.02
88.0	82.56

Calculate the relative atomic mass of strontium in this sample.

Give your answer to **three** significant figures.

(2)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(b) In which block of the Periodic Table is strontium found?

(1)

(c) Draw the dot and cross diagram for strontium chloride.

Show **outer** electrons only.

(2)

(d) A solution of strontium nitrate was prepared from strontium oxide and dilute nitric acid.

Write the equation for this reaction, including state symbols.

(2)

(e) A compound of strontium contains 49.9% strontium, 13.7% carbon and 36.4% oxygen, by mass.

Calculate the empirical formula for this compound.

[Use relative atomic masses: Sr = 87.6, C = 12.0, O = 16.0]

(3)

(Total for Question 18 = 15 marks)

P 4 6 9 3 7 A 0 1 3 2 4

19 The first ionization energies for the elements in Period 3 of the Periodic Table are

Element	Na	Mg	Al	Si	P	S	Cl	Ar
First ionization energy / $\text{kJ mol}^{-1}$	496	738	578	789	1012	1000	1251	1521

- (a) (i) Complete the electronic configuration of phosphorus, using the electrons-in-boxes notation.

Write the symbols for the sub-shells on the dotted lines.

(2)

1s

- \*(ii) The first ionization energies generally increase from left to right across the period.

Explain why the first ionization energy of sulfur is **lower** than that of phosphorus.

(2)

.....

.....

.....

.....

.....

.....

.....

- (iii) Write an equation, with state symbols, to show the **third** ionization energy of phosphorus.

(2)

\* (b) (i) Explain why the first ionization energy of nitrogen is greater than the first ionization energy of phosphorus.

(3)

(ii) Draw a dot and cross diagram to show the bonding in a molecule of nitrogen.  
Show **outer** electrons only.

(2)

(c) Solid white phosphorus exists as  $P_4$  molecules.

Calculate the number of molecules in 24.8 g of white phosphorus.

[The Avogadro constant,  $L = 6.02 \times 10^{23} \text{ mol}^{-1}$ ]

(2)

(Total for Question 19 = 13 marks)

P 4 6 9 3 7 A 0 1 5 2 4

20 Compound **X** has the molecular formula  $C_5H_{12}$ .

(a) Draw the **displayed** formulae of the **three** structural isomers of  $C_5H_{12}$ .

(2)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(b)  $C_5H_{12}$  reacts with chlorine to form a mixture of products.

(i) Classify the type and mechanism of this reaction.

(2)

(ii) Write the equations for the two propagation steps for this mechanism. Use the molecular formula,  $C_5H_{12}$ , in your first equation. Curly arrows are not required.

(2)

(iii) Write the equation for **one** termination step for this mechanism. Curly arrows are not required.

(1)

- (c) An experiment was carried out to determine the enthalpy change of combustion of compound **X**,  $C_5H_{12}$ .

100.0 g of water was heated by burning 0.144 g of compound **X**.

The temperature rise of the water was  $14.5^\circ\text{C}$ .

- (i) Calculate the energy transferred, in **kJ**, in this experiment.

Use the equation

$$\text{heat energy produced (J)} = \text{mass of water} \times 4.18 \times \text{temperature change} \quad (1)$$

energy transferred = ..... kJ

- (ii) Calculate the number of moles of compound **X** used in this experiment. (1)

moles of **X** = .....

- (iii) Calculate the enthalpy change of combustion of compound **X**. Include a sign and units in your answer. (2)

enthalpy change of combustion = .....
