Morning (Time: 1 hour 45 minutes)

Paper reference **WPH15/01**

Physics

International Advanced Level
UNIT 5: Thermodynamics, Radiation, Oscillations and Cosmology

You must have:
Scientific calculator

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- **Show all your working out** in calculations and **include units** where appropriate.

Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- The list of data, formulae and relationships is printed at the end of this booklet.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

SECTION A

Answer ALL questions.

For questions 1–10, in Section A, select one answer from A to D and put a cross in a box ☒. If you change your mind, put a line through the box ☒ and then mark your new answer with a cross ☒.

1 Massive nuclei may undergo nuclear fission.

Which of the following is correct for a fission process?

☒ **A** A high density of nuclei is required.

☒ **B** A high temperature is required.

☒ **C** The binding energy of the nuclei stays constant.

☒ **D** The total mass of the nuclei decreases.

(Total for Question 1 = 1 mark)

---

2 Some isotopes are unstable and undergo radioactive decay.

Which of the following is **not** correct for radioactive decay?

☒ **A** Radioactive decay is a random process.

☒ **B** Radioactive decay is a spontaneous process.

☒ **C** It is possible to predict what the decay products might be.

☒ **D** It is possible to predict which nucleus will decay next.

(Total for Question 2 = 1 mark)

---

3 Nucleus X decays to nucleus Y by emitting an alpha particle (α).

Which of the following gives the energy released in this decay?

☒ **A** [mass of α] $\times c^2$

☒ **B** [mass of α – mass of Y] $\times c^2$

☒ **C** [mass of X – mass of Y – mass of α] $\times c^2$

☒ **D** [mass of X – mass of Y + mass of α] $\times c^2$

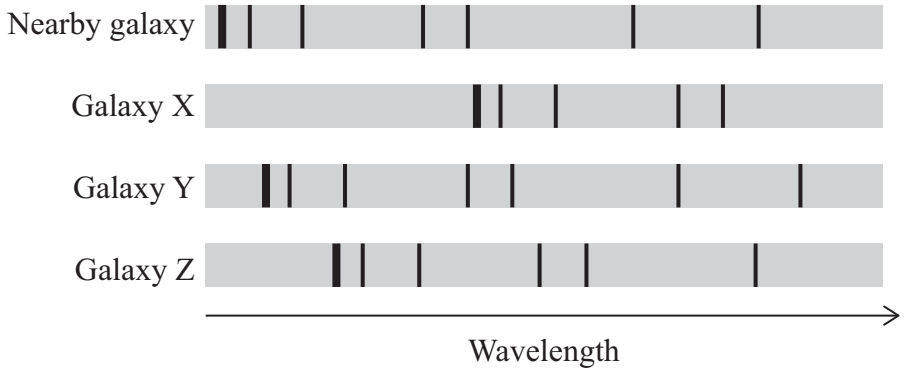

(Total for Question 3 = 1 mark)

4 The spectra of light from a nearby galaxy and three distant galaxies are observed in a laboratory.

The diagram shows the observed spectra.

Which of the following gives the galaxies in order of increasing distance from Earth?

☒ **A** X Y Z

☒ **B** Y X Z

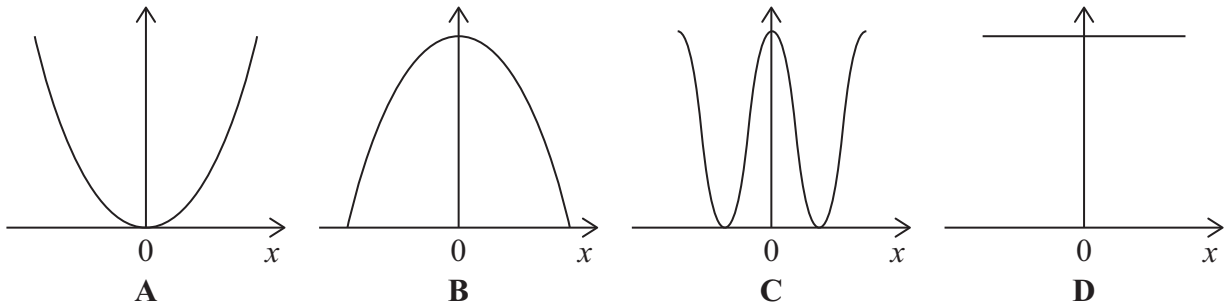

☒ **C** Y Z X

☒ **D** Z Y X

(Total for Question 4 = 1 mark)

5 A mass is hung from a spring. The mass is displaced and released so that it oscillates vertically.

Which of the following shows how the kinetic energy of the mass varies with displacement x?

☒ **A**

☒ **B**

☒ **C**

☒ **D**

(Total for Question 5 = 1 mark)

6 A planet has a mass of 1.3×10^{25} kg and a radius of 7.9×10^{6} m.

A spacecraft of mass 750 kg lands on the surface of the planet.

Which of the following gives the weight of the spacecraft at the surface of the planet?

☒ **A** $\dfrac{6.67 \times 10^{-11} \times 1.3 \times 10^{25}}{7.9 \times 10^{6}}$

☒ **B** $\dfrac{6.67 \times 10^{-11} \times 1.3 \times 10^{25} \times 750}{7.9 \times 10^{6}}$

☒ **C** $\dfrac{6.67 \times 10^{-11} \times 1.3 \times 10^{25}}{\left(7.9 \times 10^{6}\right)^{2}}$

☒ **D** $\dfrac{6.67 \times 10^{-11} \times 1.3 \times 10^{25} \times 750}{\left(7.9 \times 10^{6}\right)^{2}}$

(Total for Question 6 = 1 mark)

7 A proton produces an electric field. The proton also produces a gravitational field.

Which of the following is **not** correct?

☒ **A** The field lines are radial for each field.

☒ **B** The equipotentials are spherical for each field.

☒ **C** The potential for each field is proportional to $\left(\dfrac{1}{\text{distance from proton}}\right)$

☒ **D** The field strength for each field is proportional to $\left(\dfrac{1}{\text{distance from proton}}\right)$

8 An object, of mass 1200 kg, is launched from the surface of the Earth to a height of 2000 m.

The Earth has a mass M_E and a radius R_E.

Which of the following gives the change in gravitational potential energy of the object?

☒ **A** $-GM_E \times \left(\frac{1200}{R_E} - \frac{1200}{2000} \right)$

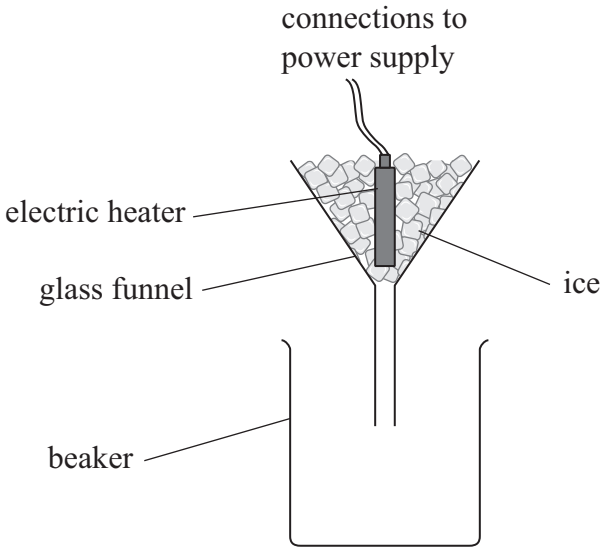

☒ **B** $-GM_E \times \left(\frac{1200}{R_E + 2000} - \frac{1200}{2000} \right)$

☒ **C** $-GM_E \times \left(\frac{1200}{2000} - \frac{1200}{R_E + 2000} \right)$

☒ **D** $-GM_E \times \left(\frac{1200}{R_E + 2000} - \frac{1200}{R_E} \right)$

(Total for Question 8 = 1 mark)

9 A student determined the specific latent heat L of ice, using the apparatus shown.

The student switched on the heater and started a stopwatch. He switched off the heater and recorded a time t. He determined the mass of water in the beaker.

The heater has a stated power P.

The student's calculated value for L was less than the accepted value.

Which of the following is a possible reason for this?

☒ **A** Energy was transferred to the surroundings.

☒ **B** The initial temperature of the ice was less than 0 °C.

☒ **C** The heater was switched on for a time greater than t.

☒ **D** The power of the heater was less than P.

10 The luminosity of the Sun is $L_\odot$

When the Sun becomes a red giant star, its radius and its surface temperature will change.

The radius will increase by a factor of 200.
The surface temperature will decrease by a factor of 2.

Which of the following will be the new luminosity of the Sun?

- ☒ **A** $1.0 \times 10^2 L_\odot$
- ☒ **B** $2.5 \times 10^3 L_\odot$
- ☒ **C** $4.0 \times 10^4 L_\odot$
- ☒ **D** $4.0 \times 10^8 L_\odot$

(Total for Question 10 = 1 mark)

TOTAL FOR SECTION A = 10 MARKS

SECTION B

Answer ALL questions in the spaces provided.

11 A sealed cylinder contains oxygen gas at a temperature of 18 °C.

The pressure of the gas is 2.33×10^7 Pa.

The cylinder is placed in a warm room and the temperature of the gas increases to 32 °C.

Calculate the pressure exerted by the gas at a temperature of 32 °C.

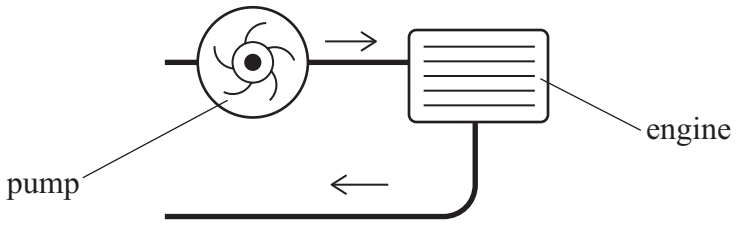

Pressure exerted by the gas = ...

12 The engine of a car heats up when the engine is working. To prevent overheating, a liquid is pumped through pipes around the engine, as shown.

Energy is transferred away from the engine by the liquid.

The specific heat capacity of the liquid is 2.3×10^3 J kg^{-1} K^{-1}.

(a) The liquid enters the pipes around the engine at a temperature of 85 °C and leaves at a temperature of 98 °C. The rate of flow of the liquid is 75 kg min^{-1}.

Calculate the rate of transfer of energy away from the engine.

(3)

Rate of transfer of energy = ...

(b) The original liquid is replaced by water of specific heat capacity 4.2×10^3 J kg^{-1} K^{-1}. The rate of flow of liquid does not change.

Explain how replacing the original liquid with water would affect the change in temperature between entering and leaving the engine.

You do not need to carry out any calculations.

(3)

(Total for Question 12 = 6 marks)

13 The kinetic theory is used to explain the behaviour of ideal gases.

(a) Show that the internal energy U of an ideal gas is given by the expression

$$U = \frac{3}{2}pV$$

14 Ice cream consists of ice crystals in a mixture of other ingredients.

A container holds $1.5 \times 10^{-3}\,m^3$ of ice cream.

The ice crystals make up 32% of the total mass of the ice cream.

Calculate the energy required to melt the ice crystals without changing the temperature of the ice cream.

density of ice cream = $550\,kg\,m^{-3}$
specific latent heat of ice = $3.3 \times 10^5\,J\,kg^{-1}$

Energy required = ...

(Total for Question 14 = 4 marks)

15 A 'Gatso camera' is a device that can determine the speed of a car.

A Gatso camera emits radio waves of frequency 24.1 GHz. The radio waves are reflected from cars as the cars approach the camera.

A car approaches the camera.

The difference in frequency between the waves reflected from the car and the waves received back at the camera is 2.88 kHz.

The speed limit on a road is 31 $m\,s^{-1}$.

The recorded speed of the car must not be more than 10% greater than the speed limit for the road.

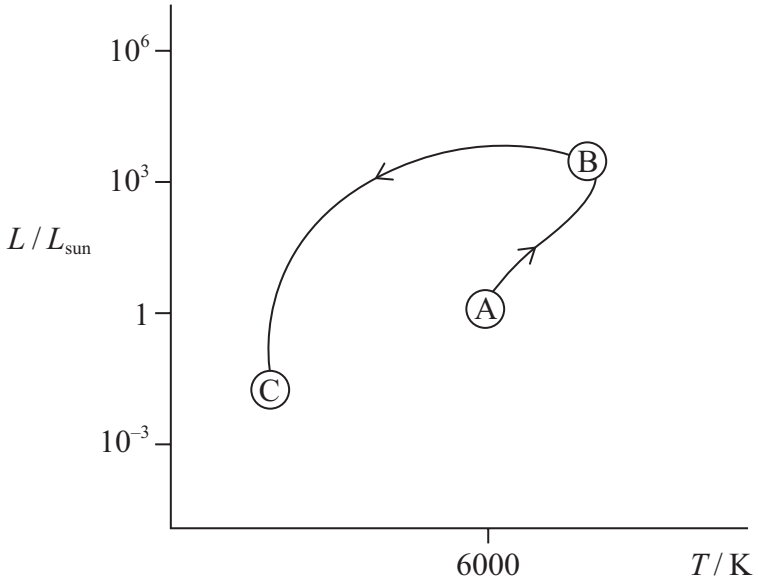

Deduce whether the speed limit is exceeded.

18 Torbernite is a naturally occurring mineral. Torbernite is radioactive because it contains uranium.

A 2.75 g sample of torbernite has an activity of 2.15×10^4 Bq.

Uranium makes up 65% of the mass of a typical sample of torbernite.

(a) Deduce whether the sample used is a typical sample.

decay constant of uranium = $4.92 \times 10^{-18}\ s^{-1}$
mass of uranium atom = 238 u

(5)

(b) The uranium decays by emitting alpha particles.

Explain why the sample of torbernite is relatively safe.

21 The Sun is at the centre of our solar system.

(a) The planets closest to the Sun move in circular orbits.

(i) The Earth makes one complete orbit of the Sun in 365 days.

Calculate the time, in days, for Venus to make one complete orbit of the Sun.

distance from Venus to Sun = 1.09×10^{11} m
distance from Earth to Sun = 1.50×10^{11} m

(3)

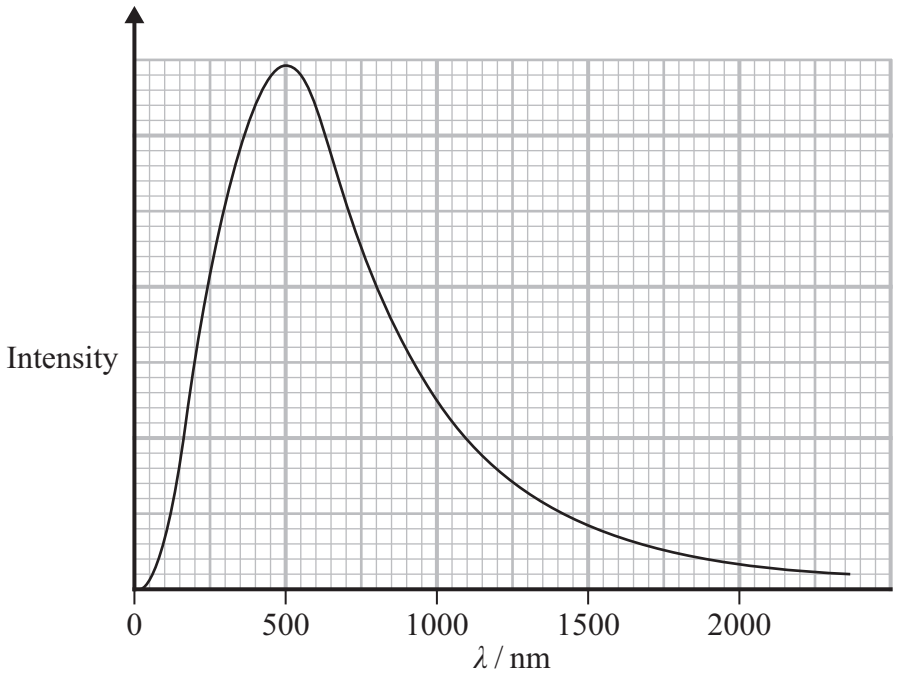

Time for Venus to make one complete orbit = ... days

(ii) The mass of the Sun is decreasing.

Explain how this will affect the radius of the Earth's orbit about the Sun.

(2)

(b) (i) The graph shows how the intensity of radiation emitted by the Sun varies for a range of wavelengths.

Show that the surface temperature of the Sun is about 6000 K.
