## Pearson Edexcel International Advanced Level

Time 1 hour 30 minutes

Paper  
reference

**WMA12/01**

### Mathematics

International Advanced Subsidiary/Advanced Level  
Pure Mathematics P2

**You must have:**

Mathematical Formulae and Statistical Tables (Yellow), calculator

Total Marks

**Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.**

### Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Inexact answers should be given to three significant figures unless otherwise stated.

### Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 10 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Leave blank

3.

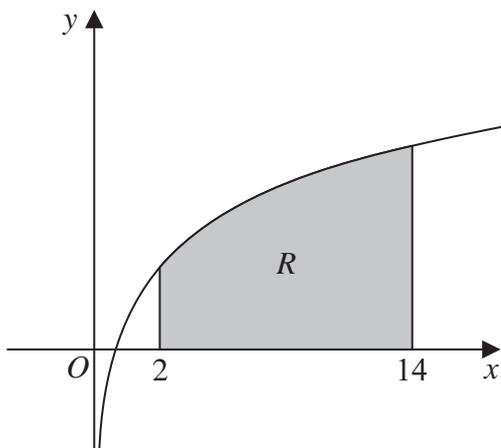

Figure 1

Figure 1 shows a sketch of part of the curve with equation  $y = \log_{10} x$

The region  $R$ , shown shaded in Figure 1, is bounded by the curve, the line with equation  $x = 2$ , the  $x$ -axis and the line with equation  $x = 14$

Using the trapezium rule with four strips of equal width,

(a) show that the area of  $R$  is approximately 10.10 (3)

(b) Explain how the trapezium rule could be used to obtain a more accurate estimate for the area of  $R$ . (1)

(c) Using the answer to part (a) and making your method clear, estimate the value of

(i)  $\int_2^{14} \log_{10} \sqrt{x} \, dx$

(ii)  $\int_2^{14} \log_{10} 100x^3 \, dx$

(4)

8. **In this question you must show all stages of your working.**  
**Solutions relying entirely on calculator technology are not acceptable.**

**Figure 2**

Figure 2 shows a sketch of part of the curve  $C$  with equation

$$y = \frac{4}{3}x^3 - 11x^2 + kx \quad \text{where } k \text{ is a constant}$$

The point  $M$  is the maximum turning point of  $C$  and is shown in Figure 2.

Given that the  $x$  coordinate of  $M$  is 2

- (a) show that  $k = 28$  (3)
- (b) Determine the range of values of  $x$  for which  $y$  is increasing. (2)

The line  $l$  passes through  $M$  and is parallel to the  $x$ -axis.

The region  $R$ , shown shaded in Figure 2, is bounded by the curve  $C$ , the line  $l$  and the  $y$ -axis.

- (c) Find, by algebraic integration, the exact area of  $R$ . (5)
