Afternoon (Time: 1 hour 30 minutes)

Paper Reference **WST01/01**

Mathematics

International Advanced Subsidiary/Advanced Level
Statistics S1

You must have:

Mathematical Formulae and Statistical Tables (Blue), calculator

Total Marks

Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. If a calculator is used instead of the tables, the value should be given to an equivalent degree of accuracy.
- Inexact answers should be given to three significant figures unless otherwise stated.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 6 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

4. A spinner can land on the numbers 10, 12, 14 and 16 only and the probability of the spinner landing on each number is the same.
The random variable X represents the number that the spinner lands on when it is spun once.

(a) State the name of the probability distribution of X . (1)

(b) (i) Write down the value of $E(X)$ (1)

(ii) Find $\text{Var}(X)$ (2)

A second spinner can land on the numbers 1, 2, 3, 4 and 5 only.
The random variable Y represents the number that this spinner lands on when it is spun once. The probability distribution of Y is given in the table below

y	1	2	3	4	5
$P(Y = y)$	$\frac{4}{30}$	$\frac{9}{30}$	$\frac{6}{30}$	$\frac{5}{30}$	$\frac{6}{30}$

(c) Find (i) $E(Y)$ (2)

(ii) $\text{Var}(Y)$ (3)

The random variable $W = aX + b$, where a and b are constants and $a > 0$
Given that $E(W) = E(Y)$ and $\text{Var}(W) = \text{Var}(Y)$

(d) find the value of a and the value of b . (5)

Each of the two spinners is spun once.

(e) Find $P(W = Y)$ (2)

5. A company director wants to introduce a performance-related pay structure for her managers. A random sample of 15 managers is taken and the annual salary, y in £1000, was recorded for each manager. The director then calculated a performance score, x , for each of these managers.

The results are shown on the scatter diagram in Figure 1 on the next page.

- (a) Describe the correlation between performance score and annual salary. (1)

The results are also summarised in the following statistics.

$$\sum x = 465 \quad \sum y = 562 \quad S_{xx} = 2492 \quad \sum y^2 = 23140 \quad \sum xy = 19428$$

- (b) (i) Show that $S_{xy} = 2006$ (1)

- (ii) Find S_{yy} (2)

- (c) Find the product moment correlation coefficient between performance score and annual salary. (2)

The director believes that there is a linear relationship between performance score and annual salary.

- (d) State, giving a reason, whether or not these data are consistent with the director's belief. (1)

- (e) Calculate the equation of the regression line of y on x , in the form $y = a + bx$. Give the value of a and the value of b to 3 significant figures. (4)

- (f) Give an interpretation of the value of b . (1)

- (g) Plot your regression line on the scatter diagram in Figure 1 (2)

The director hears that one of the managers in the sample seems to be underperforming.

- (h) On the scatter diagram, circle the point that best identifies this manager. (1)

The director decides to use this regression line for the new performance related pay structure.

- (i) Estimate, to 3 significant figures, the new salary of a manager with a performance score of 30 (2)
