

# Mark Scheme (Results)

Summer 2023

Pearson Edexcel International Advanced Level  
In Statistics S3 (WST03)  
Paper 01

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if **the candidate's response** is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## General Instructions for Marking

The total number of marks for the paper is 75.

Edexcel Mathematics mark schemes use the following types of marks:

### 'M' marks

These are marks given for a correct method or an attempt at a correct method. In Mechanics they are usually awarded for the application of some mechanical principle to produce an equation, e.g. resolving in a particular direction; taking moments about a point; applying a suvat equation; applying the conservation of momentum principle; etc.

The following criteria are usually applied to the equation.

To earn the M mark, the equation

- (i) should have the correct number of terms
- (ii) each term needs to be dimensionally correct

For example, in a **moments equation, every term must be a 'force x distance' term or 'mass x distance', if we allow them to cancel 'g' s.**

For a resolution, all terms that need to be resolved (multiplied by sin or cos) must be resolved to earn the M mark.

**'M' marks are sometimes** dependent (DM) on previous M marks having been earned, e.g. when two simultaneous equations have been set up by, for example, resolving in two directions and there is then an M mark for solving the equations to find a particular quantity – this M mark is often dependent on the two previous M marks having been earned.

### 'A' marks

These are dependent accuracy (or sometimes answer) marks and can only be awarded if the previous M mark has been earned. e.g. M0 A1 is impossible.

### 'B' marks

These are independent accuracy marks where there is no method (e.g. often given for a comment or for a graph).

A and B marks may be f.t. – follow through – marks.

## General Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes:

- bod means benefit of doubt
- ft means follow through
  - the symbol  $\surd$  will be used for correct ft
- cao means correct answer only
- cso means correct solution only, i.e. there must be no errors in this part of the question to obtain this mark
- isw means ignore subsequent working

- awrt means answers which round to
- SC means special case
- oe means or equivalent (and appropriate)
- dep means dependent
- indep means independent
- dp means decimal places
- sf means significant figures
- \* means the answer is printed on the question paper
- $\square$  means the second mark is dependent on gaining the first mark

**All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft** to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

If a candidate makes more than one attempt at any question:

- If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
- If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.

Ignore wrong working or incorrect statements following a correct answer.

Question Number	Scheme		Marks
1 (a)	When the data is ordinal e.g. Judges' ranks		B1
	When a non-linear relationship might be expected		B1
			(2)
(b)	$H_0: \rho = 0, H_1: \rho \neq 0$		B1
	Critical value $r_s = -0.6485$ or CR: $r_s \leq -0.6485$ (and $r_s \geq 0.6485$ )		B1
	Reject $H_0$ or significant or lies in the critical region		M1
	The Spearman's rank correlation coefficient shows there is sufficient evidence of a correlation [between the length and maximum diameter of the melons]		A1
			(4)
(c)	$H_0: \rho = 0, H_1: \rho < 0$		B1
	Critical value $r = -0.5494$ or CR: $r \leq -0.5494$		B1
	The product moment correlation coefficient shows there is insufficient evidence of a <b>negative</b> correlation [between the length and maximum diameter of the melons]		B1
			(3)
<b>Notes</b>			<b>Total 9</b>
(a)	<b>B1</b>	For one correct condition	
	<b>B1</b>	For a second correct condition. Condone not underlying normal	
(b)	<b>B1</b>	For both hypotheses correct. Must be in terms of $\rho$ . Must be attached to $H_0$ and $H_1$	
	<b>B1</b>	For critical value of $-0.6485$ (Allow $-0.5636$ if a one tailed test is stated for $H_1$ ) Condone $0.6485$ if compared with $0.673$	
	<b>M1</b>	A correct statement – no context needed but do not allow contradicting non contextual comments. fit their CV provided the CV is negative (May be implied by a correct conclusion) Condone a positive CV if a comparison with $0.673$ seen	
	<b>A1</b>	For a correct conclusion which is rejecting $H_0$ Allow negative correlation This mark is independent of the hypotheses	
(c)	<b>B1</b>	For both hypotheses correct. Must be in terms of $\rho$ . Must be attached to $H_0$ and $H_1$	
	<b>B1</b>	For critical value of $-0.5494$ (Allow $-0.6319$ if a two tailed test is stated for $H_1$ ) Condone $0.5494$ if compared with $0.525$	
	<b>B1</b>	For a correct conclusion which is not rejecting $H_0$	

Question Number	Scheme			Marks
2 (a)	$\frac{60 \times 60}{240}$ or $\frac{60 \times 84}{240}$ or $\frac{60 \times 96}{240}$			M1
	15 and 21 and 24			A2
				(3)
(b)	$H_0$ : There is no association between the payment amount and payment method used $H_1$ : There is an association between the payment amount and payment method used			B1
	Observed	Expected	$\frac{(O - E)^2}{E}$	M1
	23	15	$\frac{(23 - '15')^2}{'15'} = 4.2667$	
	21	21	$\frac{(21 - '21')^2}{'21'} = 0$	
	16	24	$\frac{(16 - '24')^2}{'24'} = 2.6667$	
	$\chi^2 = 2.4048 + '4.2667' + '0' + '2.6667'$			M1
	$= 9.3381\dots$			awrt 9.34 A1
	$\nu = (3 - 1)(3 - 1) = 4 \quad \chi_4^2(0.05) = 9.488 \Rightarrow \text{CR: } X^2 \geq 9.488$			B1 B1ft
	[Not in the CR/Not significant/Do not reject $H_0$ ] There is no evidence of an association between <b>the payment amount and payment method used</b>			dA1
			(7)	
<b>Notes</b>				<b>Total 10</b>
(a)	<b>M1</b>	For a correct method for finding one expected value		
	<b>A2</b>	For all 3 answers correct (A1 for 2 correct answers or 1 correct and 3 values that sum to 60)		
(b)	<b>B1</b>	Both hypotheses correct. Must mention method <b>and</b> amount with payment at least once. (may be written in terms of independence)		
	<b>M1</b>	For a correct method for finding all three contributions to the $\chi^2$ value ft their part a May be implied by 3 correct values If expected values are incorrect then working must be shown		
	<b>M1</b>	For adding their values to 2.4048 (If all 9 values are calculated the 6 values not found in part (a) must have working shown or the correct values seen or awrt 9.34)		
	<b>A1</b>	awrt 9.34		
	<b>B1</b>	$\nu = 4$ This mark can be implied by a correct critical value of 9.488		
	<b>B1ft</b>	9.488 or better ft their DoF		
	<b>dA1</b>	Dependent on both M marks. A correct contextualised conclusion which is not rejecting $H_0$ Must mention <b>method</b> and <b>amount</b> . If no hypotheses or they are the wrong way round, then A0 here. Contradictory statements score A0. e.g. "Significant, do not reject $H_0$ ". Condone "relationship" or "connection" here but <b>not</b> "correlation".		

Question Number	Scheme		Marks
3 (a)	It is not a statistic as it involves <u>unknown</u> [population] parameter		B1
			(1)
(b)	$E(S) = E\left(\frac{3}{5}X_1 + \frac{5}{7}X_2\right) = \frac{3}{5}E(X_1) + \frac{5}{7}E(X_2)$		M1
	$= \frac{3}{5}\mu + \frac{5}{7}\mu = \frac{46}{35}\mu \neq \mu$ So $S$ is a biased estimator for $\mu$		A1
			(2)
(c)	$\frac{46}{35}\mu - \mu = \frac{11}{35}\mu$		B1ft
			(1)
(d)	$E(Y) = aE(X_1) + bE(X_2) = \mu$ $\Rightarrow (a+b)\mu = \mu$		M1
	$a + b = 1$		A1
			(2)
(e)	$\text{Var}(Y) = a^2\text{Var}(X_1) + b^2\text{Var}(X_2) = (a^2 + b^2)\sigma^2$		M1
	$\text{Var}(Y) = (a^2 + (1-a)^2)\sigma^2$		M1
	$\text{Var}(Y) = (2a^2 - 2a + 1)\sigma^2$		A1*
			(3)
<b>Notes</b>			<b>Total 9</b>
(a)	<b>B1</b>	For a correct explanation Allow $\sigma$ is unknown (Do not allow $\sigma$ is unknown variance)	
(b)	<b>M1</b>	For writing or using $E(S) = aE(X_1) + bE(X_2)$ Condone missing subscripts	
	<b>A1</b>	cao (Allow $1.31\mu \neq \mu$ )	
(c)	<b>B1ft</b>	Follow through their part (a) $-\mu$	
(d)	<b>M1</b>	For writing or using $E(Y) = aE(X_1) + bE(X_2) = \mu$ (May be implied by $a + b = 1$ ) Condone missing subscripts	
	<b>A1</b>	Cao	
(e)	<b>M1</b>	For writing or using $\text{Var}(Y) = a^2\text{Var}(X_1) + b^2\text{Var}(X_2)$ Condone missing subscripts	
	<b>M1</b>	For substitution of $b = 1 - a$ ft their part (d) into their expression for $\text{Var}(Y)$	
	<b>A1*</b>	Answer is given so no incorrect working must be seen	

Question Number	Scheme		Mark
4 (a)	$\left[ \int_a^{a+1} \frac{2}{25} t \, dt \right] = \frac{2}{25} \left[ \frac{t^2}{2} \right]_a^{a+1}$ or $F(t) = \begin{cases} 0 & t < 0 \\ \frac{1}{25} t^2 & 0 \leq t < 5 \\ 1 & t > 5 \end{cases}$ $\frac{1}{2} \left( \frac{2}{25} (a+1) + \frac{2}{25} a \right) (a+1-a)$		M1
	$\frac{1}{25} ((a+1)^2 - a^2)$ or $\frac{1}{25} (a+1)^2 - \frac{1}{25} a^2$ or $\left( \frac{1}{25} a + \frac{1}{25} + \frac{1}{25} a \right)$		M1
	$\frac{1}{25} (a^2 + 2a + 1 - a^2)$ oe $\left[ = \frac{1}{25} (2a + 1) \right]^*$		A1*
			(3)
(b)	$H_0$ : The data could be modelled by the p.d.f $H_1$ : The data could not be modelled by the p.d.f		B1
	Expected frequencies: 6, 18, 30, 42, 54		M1 A1
	$\sum \frac{(O - E)^2}{E} = \frac{(10 - '6')^2}{'6'} + \dots + \frac{(68 - '54')^2}{'54'}$ or $\sum \frac{O^2}{E} - N = \frac{10^2}{'6'} + \dots + \frac{68^2}{'54'} - 150$ or 2.666... + 1.388... + 1.2 + 1.166... + 3.629		M1
	= 10.05... awrt 10.1		A1
	$\nu = 4$		B1
	$\chi^2(0.05) = 9.488 \Rightarrow CR \geq 9.488$		B1ft
	[In the CR so there is sufficient evidence to reject $H_0$ ]		
	Sufficient evidence to say that data does not fit the given p.d.f		dA1
			(8)
<b>Notes</b>			<b>Total 11</b>
(a)	<b>M1</b>	For correct integration, ignore limits or finding the area of a trapezium	
	<b>M1</b>	For substitution of the limits. May be implied by $\frac{1}{25} (a^2 + 2a + 1 - a^2)$ or simplifying the expression for the area of the trapezium	
	<b>A1*</b>	Answer is given so no incorrect working should be seen. At least one correct line of working from the method mark to the final answer should be seen	
(b)	<b>B1</b>	Both hypotheses correct. Allow $H_0$ : The p.d.f/f(t) is a suitable model $H_1$ : The p.d.f/f(t) is not a suitable model	
	<b>M1</b>	For a correct method to find at least one expected frequency e.g. $\frac{1}{25} \times 150$ Ignore any reference to limits	
	<b>A1</b>	For all 5 expected frequencies correct	
	<b>M1</b>	For an attempt at the test statistic, at least 2 correct expressions/values ft their expected frequencies	
	<b>A1</b>	awrt 10.1	
	<b>B1</b>	$\nu = 4$ This mark can be implied by a correct critical value of 9.488	
	<b>B1ft</b>	9.488 or better ft their DoF	
	<b>dA1</b>	Dependent on 2 <sup>nd</sup> M1. A correct conclusion based on their $\chi^2$ critical value If no hypotheses or they are the wrong way round, then A0 here.	

Question Number	Scheme		Marks
5 (a)	$\bar{x} \pm 1.6449 \times \frac{5}{\sqrt{10}}$		M1 B1
	$\bar{x} \pm 2.60 \Rightarrow (\bar{x} - 2.60, \bar{x} + 2.60) *$		A1*
			(3)
(b)	$\bar{y} \pm 1.96 \times \frac{3}{\sqrt{20}}$		M1 B1
	$\bar{y} \pm 1.31 \Rightarrow (\bar{y} - 1.31, \bar{y} + 1.31)$		A1
			(3)
(c)(i)	$\bar{X} - \bar{Y} \sim N\left(\mu - \mu, \frac{5^2}{10} + \frac{3^2}{20}\right) \Rightarrow \bar{X} - \bar{Y} \sim N(0, 2.95)$		M1 A1
(ii)	Do not overlap when either		
	$\bar{x} - 2.60 > \bar{y} + '1.31'$ or $\bar{x} + 2.60 < \bar{y} - '1.31'$		M1
	$\bar{x} - \bar{y} > 3.91$ or $\bar{x} - \bar{y} < -3.91$		A1ft
	$2 \times P(\bar{X} - \bar{Y} > 3.91) = 2 \times P\left(Z > \frac{'3.91' - '0'}{'\sqrt{2.95}'}\right) = [2 \times P(Z > 2.276\dots)]$		M1 M1
	$[2 \times 0.0113] = 0.0226$ (calculator gives $[2 \times 0.0114\dots] = 0.0228$ )		A1
			(7)
<b>Notes</b>			<b>Total 3</b>
(a)	<b>M1</b>	For use of $\bar{x} \pm z$ value $\times \frac{5}{\sqrt{10}}$	
	<b>B1</b>	For use of $z = 1.6449$ or better	
	<b>A1*</b>	Answer is given so no incorrect working should be seen (condone use of 1.645)	
(b)	<b>M1</b>	For use of $\bar{y} \pm z$ value $\times \frac{3}{\sqrt{20}}$	
	<b>B1</b>	For use of $z = 1.96$ or better	
	<b>A1</b>	For $(\bar{y} - \text{awrt}1.31, \bar{y} + \text{awrt}1.31)$ Allow 1.315	
(c)(i)	<b>M1</b>	For a correct method to find the variance (May be seen in a standardisation expression)	
	<b>A1</b>	For $N(0, 2.95)$ (May be seen in a standardisation expression) Allow $N\left(0, \frac{5^2}{10} + \frac{3^2}{20}\right)$ oe	
(ii)	<b>M1</b>	For $\bar{x} - 2.60 > \bar{y} + 1.31$ oe or $\bar{x} + 2.60 > \bar{y} - 1.31$ oe ft part (b)	
	<b>A1ft</b>	For $\bar{x} - \bar{y} > '3.91'$ or $\bar{x} - \bar{y} < -'3.91'$ ft part (b)	
	<b>M1</b>	For multiplying by 2 (may be seen at any stage of their working)	
	<b>M1</b>	For standardising ft their 3.91, their mean and their standard deviation (Do not allow use of 2.6 or 1.31 as their 3.91)	
	<b>A1</b>	For answers in the range awrt 0.0226 – awrt 0.0228	

Question Number	Scheme		Marks
6 (a)	$\alpha = 5.1$		B1
	$\beta = \sqrt{\frac{1694.65 - 65 \times (5.1)^2}{64}}$		M1
	$= 0.25$		A1
			(3)
(b)	$H_0 : \mu_A = \mu_B$ $H_1 : \mu_A < \mu_B$		B1
	$z = \pm \frac{5.0 - 5.1}{\sqrt{\frac{0.24^2}{70} + \frac{0.25^2}{65}}}$		M1 M1
	$= -2.367...$		awrt -2.37
	One tailed c.v. $z = -1.6449$ or CR: $z \leq -1.6449$		B1
	In CR/Significant/Reject $H_0$		M1
	Sufficient evidence to support Roxane's claim		A1
			(7)
(c)	Since the sample is <b>large</b> the <b>CLT</b> applies.		M1
	No [need to assume that the fat content is normally distributed]		A1
			(2)
(d)	Assumed that $s^2 = \sigma^2$ in <b>both</b> groups		B1
			(1)
<b>Notes</b>			<b>Total 13</b>
(a)	<b>B1</b>	cao	
	<b>M1</b>	For a correct method to find $\beta$ using their $\alpha$	
	<b>A1</b>	Cao	
(b)	<b>B1</b>	Both hypotheses correct. Allow equivalent hypotheses. Must be in terms of $\mu$	
	<b>M1</b>	For correct standard error fit their $s$ in part a	
	<b>M1</b>	For an attempt to find the test statistic, fit their SE and their $\alpha$	
	<b>A1</b>	awrt -2.37 (Allow 2.37)	
	<b>B1</b>	-1.6449 or better (seen) (Allow 1.6449 or better if comparing to their 2.37)	
(b)	<b>M1</b>	A correct statement – need not be contextual but do not allow contradicting non contextual comments. fit their CV and test statistic	
	<b>A1</b>	A correct contextual statement e.g sufficient evidence to support that crisps from <b>brand A</b> have a <b>lower fat</b> content than the crisps from <b>brand B</b> (must include the words in bold)	
(c)	<b>M1</b>	A suitable comment that mentions large and CLT	
	<b>A1</b>	A correct answer, context not required.	
(d)	<b>B1</b>	For the assumption that sample variance = population variance for <b>both</b> groups	

Question Number	Scheme		Marks	
7 (a)	$E(X) = 4 \times 15 - 3 \times 10 [= 30]$		M1	
	$\text{Var}(X) = 4^2 \times 5^2 + 3^2 \times 4^2 [= 544]$		M1	
	So $X \sim N(30, 544)$			
	$P(X < 40) = P\left(Z < \frac{40 - '30'}{\sqrt{544}}\right) [= P(Z < 0.428...)]$		M1	
	$= 0.6664$	(Calculator gives 0.6659...)	awrt 0.666	A1
			(4)	
(b)	$E(A + B + D) = 15 + 10 + 3 \times 20 = [85]$		M1	
	$\text{Var}(A + B + D) = 5^2 + 4^2 + 3 \times \sigma^2 = [41 + 3\sigma^2]$		M1	
	So $A + B + D \sim N(85, 41 + 3\sigma^2)$			
	$P(A + B + D < 76) = P\left(Z < \frac{76 - 85}{\sqrt{41 + 3\sigma^2}}\right) = 0.242$			
	So $\frac{-9}{\sqrt{41 + 3\sigma^2}} = -0.7$	or $\frac{9}{\sqrt{41 + 3\sigma^2}} = 0.7$	(Calculator gives $-0.69988...$ )	M1 A1
	$3\sigma^2 = \left(\frac{-9}{-0.7}\right)^2 - 41$			dM1
	$\sigma = 6.437...$		awrt 6.44	A1
			(6)	
<b>Notes</b>			<b>Total 10</b>	
(a)	<b>M1</b>	For a correct method to find $E(X)$ . May be implied by a correct standardisation expression.		
	<b>M1</b>	For a correct method to find $\text{Var}(X)$ . Allow $\sqrt{544}$ oe or $23.3^2$ or better. May be implied by a correct standardisation expression.		
	<b>M1</b>	For standardising ( $\pm$ ) using their mean and their variance		
	<b>A1</b>	awrt 0.666		
(b)	<b>M1</b>	For a correct method to find $E(A + B + D)$		
	<b>M1</b>	For a correct method to find $\text{Var}(A + B + D)$		
	<b>M1</b>	For standardising ( $\pm$ ) using their mean and their standard deviation which is in terms of $\sigma^2$ and setting equal to $-0.7$ or better. Allow $+0.7$		
	<b>A1</b>	For the correct equation		
	<b>dM1</b>	Dependent on the previous M mark. For squaring and rearranging leading to an equation in $\sigma^2$		
	<b>A1</b>	awrt 6.44 (Do not award if previous A mark was not awarded)
