Pearson Edexcel		Centre Number	Candidate Number
International GCSE (9–1)			
Wednesday 10 June 2020			
Afternoon (Time: 1 hour 15 minutes)		Paper Reference 4CH1/2C	
Chemistry Unit: 4CH1 Paper 2C			
You must have: Calculator, ruler			Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Show all the steps in any calculations and state the units.
- Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Information

- The total mark for this paper is 70.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

Answer ALL questions.

1 A student is given a mixture of salt solution and sand.

She wants to obtain pure water from the mixture.

(a) She separates the sand from the salt solution.

Which method of separation should she use?

(1)

- ☐ A crystallisation
- ☐ B filtration
- ☐ C fractional distillation
- ☐ D simple distillation

(b) The student then uses this apparatus to obtain pure water from the salt solution.

- 2 In a chromatography experiment a student uses samples of three pure food dyes, blue (B), red (R) and yellow (Y).

He also uses samples of four unknown substances, S, T, U and V.

The student puts a small drop of each substance on the pencil line.

The diagram shows the student's chromatogram at the end of the experiment.

- (a) Which of the unknown substances contains only one food dye?

(1)

- ☐ A substance S
- ☐ B substance T
- ☐ C substance U
- ☐ D substance V

3 (a) The box gives the names of some metals.

calcium	copper	iron	magnesium	silver	zinc
---------	--------	------	-----------	--------	------

(i) Identify the metal from the box that burns with a bright white flame.

(1)

(ii) In the Earth, metals are found either in ores or as uncombined elements.

Explain which metal from the box is most likely to be found as an uncombined element.

(2)

(b) This is the order of reactivity of four metals.

most reactive	aluminium
↓	iron
	lead
least reactive	copper

The method used to obtain a metal from its oxide depends on the reactivity of the metal.

Two possible methods are

Method 1 heating the metal oxide with carbon

Method 2 electrolysis

Explain which method should be used to obtain lead from lead(II) oxide, PbO

Include an equation for the formation of lead in your answer.

(c) The diagram shows the arrangement of the particles in a pure metal.

Metals are often made into alloys to make them harder.

Explain why alloys are harder than pure metals.

Draw a diagram to support your answer.

4 Alcohols contain the functional group —OH

(a) Give the structural formula of the alcohol that contains one carbon atom.

(1)

(b) Ethanol ($\text{C}_2\text{H}_5\text{OH}$) is an alcohol that can be obtained from glucose ($\text{C}_6\text{H}_{12}\text{O}_6$).

(i) Name the process that converts glucose into ethanol.

(1)

(ii) Explain why this process is carried out in the absence of air and at a temperature below 40°C .

(4)

(c) The table gives information about some organic compounds in the same homologous series.

Compound	Molecular formula	Displayed formula
ethanoic acid	$C_2H_4O_2$	
propanoic acid		<pre> H H O H — C — C — C / \ H H O — H </pre>
	$C_4H_8O_2$	<pre> H H H O H — C — C — C — C / \ H H H O — H </pre>

(i) Complete the table by giving the missing information.

(3)

(ii) Name the homologous series that contains these compounds.

(d) The compounds in the table can react with alcohols to form esters.

When preparing esters, a small amount of concentrated sulfuric acid is also used.

(i) State the purpose of the acid.

(1)

(ii) Draw the displayed formula of the ester that forms when propanoic acid reacts with ethanol.

(2)

(iii) Esters have particular uses that depend on their properties.

Give an example of a property and use of esters.

(2)

- (ii) The equation for the reaction between butadiene and bromine can be shown using displayed formulae.

The table gives some bond energies.

Bond	C—H	C=C	Br—Br	C—C	C—Br
Bond energy in kJ/mol	412	612	193	348	276

Use this information to calculate the enthalpy change, ΔH , for the reaction.

Include a sign in your answer.

(4)

$\Delta H = \dots\dots\dots$ kJ/mol

(c) A scientist does an investigation to find out if butadiene would be a good fuel.

He burns a sample of butadiene gas and observes that carbon forms as black soot.

(i) Complete the equation to explain the scientist's observation.

(1)

(ii) Explain how one of the products, other than carbon, may cause a problem.

(2)

.....

.....

.....

.....

(iii) The equation for the combustion of butadiene in excess oxygen is

The enthalpy change for this reaction, ΔH , is -3446 kJ/mol .

Complete the energy profile diagram for the reaction.

Label the enthalpy change for this reaction, ΔH , and the activation energy.

6 A student is provided with a bottle containing a colourless solution X.

Solution X is thought to be dilute sulfuric acid of concentration 0.10 mol/dm^3 .

The student does some experiments on samples of solution X to try to show that it is dilute sulfuric acid.

The student adds a few drops of litmus to a sample of solution X.

The litmus turns red.

(a) The student knows that the products of the electrolysis of dilute sulfuric acid are hydrogen and oxygen.

She carries out the electrolysis using this apparatus.

(i) Suggest why the student does not use zinc electrodes in her experiment.

(1)

(ii) State what is observed at both the anode and the cathode during the electrolysis.

(1)

(iii) Which of these tests shows that the gas formed at the cathode is hydrogen?

(1)

- ☐ **A** a glowing splint relights
- ☐ **B** a burning splint gives a squeaky pop
- ☐ **C** a burning splint goes out
- ☐ **D** limewater turns cloudy

(b) Describe a test to show that solution X contains sulfate ions.

(2)

- (c) The student then does a titration to see if the concentration of the dilute sulfuric acid is 0.10 mol/dm^3 .

She measures 25.0 cm^3 of potassium hydroxide solution into a conical flask, and then adds a few drops of indicator solution.

- (i) Name the piece of apparatus the student should use to measure 25.0 cm^3 of the potassium hydroxide solution.

(1)

- (ii) The concentration of potassium hydroxide in the solution is 0.125 mol/dm^3 .

Calculate the amount, in mol, of KOH in 25.0 cm^3 of this solution.

(2)

amount = mol

- (iii) The equation for the reaction in the titration is

Calculate the volume, in cm^3 , of 0.10 mol/dm^3 sulfuric acid needed to neutralise 25.0 cm^3 of the potassium hydroxide solution.

(3)

volume of sulfuric acid = cm^3

7 This question is about reactions involving gases.

(a) Potassium carbonate reacts with dilute hydrochloric acid to produce carbon dioxide gas.

The equation for the reaction is

Calculate the volume, in cm^3 , of carbon dioxide gas produced when 6.9 g of potassium carbonate reacts with excess dilute hydrochloric acid.

[M_r of $\text{K}_2\text{CO}_3 = 138$]

[molar volume of CO_2 at rtp = 24 dm^3]

(3)

volume = cm^3
