Paper 1

Thursday 17 January 2013 – Morning Time: 2 hours	Paper Reference 4PM0/01
--	-----------------------------------

Calculators may be used.	Total Marks
---------------------------------	-------------

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Without sufficient working, correct answers may be awarded no marks.
- Answer the questions in the spaces provided
– *there may be more space than you need.*

Information

- The total mark for this paper is 100.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

Answer all ELEVEN questions.

Write your answers in the spaces provided.

You must write down all stages in your working.

1 (a) On the axes below sketch the lines with equations

(i) $y = 8$ (ii) $y + x = 6$ (iii) $y = 3x - 4$

Show the coordinates of the points where each line crosses the coordinate axes.

(3)

(b) Show, by shading, the region R which satisfies $y \geq 3x - 4$, $y + x \geq 6$, $x \geq 0$ and $y \leq 8$

(1)

(Total for Question 1 is 4 marks)

Question 7 continued

A large rectangular area with a rounded border, containing 25 horizontal dotted lines for writing.

Question 8 continued

A large rectangular area with a rounded border, containing 25 horizontal dotted lines for writing.

Question 9 continued

A large rectangular area with a rounded border, containing 25 horizontal dotted lines for writing.

10

$$f(x) = 2x^2 - 5x + 1$$

The equation $f(x) = 0$ has roots α and β . Without solving the equation

(a) find the value of $\alpha^2 + \beta^2$ (3)

(b) show that $\alpha^4 + \beta^4 = \frac{433}{16}$ (2)

(c) form a quadratic equation with integer coefficients which has roots

$$\left(\alpha^2 + \frac{1}{\alpha^2}\right) \text{ and } \left(\beta^2 + \frac{1}{\beta^2}\right) \quad (7)$$

Question 10 continued

A large rectangular area containing 25 horizontal dotted lines for writing the answer to Question 10.

11 $f(x) = x^3 + px^2 + qx + 6 \quad p, q \in \mathbb{Z}$

Given that $f(x) = (x - 1)(x - 3)(x + r)$

(a) find the value of r . (1)

Hence, or otherwise,

(b) find the value of p and the value of q . (3)

Figure 2

Figure 2 shows the curve C with equation $y = f(x)$ which crosses the x -axis at the points with coordinates $(3, 0)$ and $(1, 0)$ and at the point A . The point B on C has x -coordinate 2

(c) Find an equation of the tangent to C at B . (5)

(d) Show that the tangent at B passes through A . (2)

(e) Use calculus to find the area of the finite region bounded by C and the tangent at B . (5)

.....

.....

.....

Question 11 continued

A large rectangular area with rounded corners, containing 25 horizontal dotted lines for writing.
