- 6 John and Peter play a game with a pack of 26 white cards. The pack has 13 cards with a blue spot in the middle of one side of the card and 13 cards with a red spot in the middle of one side of the card.

John and Peter take it in turns to pick at random a card from the pack. The card is not returned to the pack.

**The winner of the game is the first person to pick a card with a blue spot.**

John picks at random a card from the pack and does not return the card to the pack.

- (a) Write down the probability that John wins the game with his first card. (1)

If John does not win the game with his first card, then Peter picks at random a card from the pack and does not return the card to the pack.

If Peter picks a card with a blue spot then he wins the game.

If Peter does not win the game with his first card, then John picks at random a second card from the pack and does not return the card to the pack.

If John does not win the game with his second card, then Peter picks at random a second card from the pack.

If Peter does not win the game with his second card the game stops and the result is a draw.

The incomplete probability tree diagram, on page 13, represents a game in which John and Peter can pick at most two cards each.

- (b) Complete the probability tree diagram for this game. (4)

- (c) Work out the probability that Peter wins the game with his first card. (2)

- (d) Work out the probability that Peter wins the game. (3)
