Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Types of mark

- M marks: method marks
- A marks: accuracy marks
- B marks: unconditional accuracy marks (independent of M marks)

Abbreviations

- cao – correct answer only
- ft – follow through
- isw – ignore subsequent working
- SC – special case
- oe – or equivalent (and appropriate)
- dep – dependent
- indep – independent
- awrt – answer which rounds to
- eeoo – each error or omission

- cas – correct answer scores full marks (unless from obvious incorrect working)
- wr – working required

No working

If no working is shown then correct answers normally score full marks

If no working is shown then incorrect (even though nearly correct) answers score no marks.

With working

If there is a wrong answer indicated on the answer line always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.

If it is clear from the working that the “correct” answer has been obtained from incorrect working, award 0 marks.

If a candidate misreads a number from the question. e.g., uses 252 instead of 255; method marks may be awarded provided the question has not been simplified. Examiners should send any instance of a suspected misread to review. If there is a choice of methods shown, then award the lowest mark, unless the subsequent working makes clear the method that has been used.

If there is no answer on the answer line then check the working for an obvious answer.

Ignoring subsequent work

It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question: eg. Incorrect cancelling of a fraction that would otherwise be correct.

It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect e.g. algebra.

Transcription errors occur when candidates present a correct answer in working, and write it incorrectly on the answer line; mark the correct answer.

Parts of questions

Unless allowed by the mark scheme, the marks allocated to one part of the question CANNOT be awarded to another.

5	$x = 3 - 2y \Rightarrow 4(3 - 2y)^2 - y^2 = 27$ or $y = \frac{3 - x}{2} \Rightarrow 4x^2 - \left(\frac{3 - x}{2}\right)^2 = 27$		6	M1 for correct substitution of the linear equation $x + 2y = 3$ into the quadratic equation $4x^2 - y^2 = 9$ to form an (unsimplified) quadratic equation in either x or y . This mark can be implied by the second method mark.
	$4(9 - 12y + 4y^2) - y^2 = 27$ or $4x^2 - \left(\frac{9 - 3x}{2} + \frac{x^2}{4}\right) = 27$			M1 for correct expansion of either their $(3 - 2y)^2$ or $\left(\frac{3 - x}{2}\right)^2$ This mark can be implied by the third method mark
	$15y^2 - 48y + 9 = 0$ $\frac{15x^2}{4} + \frac{3x}{2} - \frac{117}{4} = 0$			M1 dep on first M1 for multiplying out and collecting terms, forming a 3 term quadratic in any form of $ax^2 + bx + c (= 0)$ with at least 2 coefficients (a or b or c) correct (oe e.g. $5y^2 - 16y + 3 = 0$, $15x^2 + 6x - 117 = 0$, $5x^2 + 2x - 39 = 0$) etc look out for all signs reversed)
	$(5y - 1)(y - 3) = 0$ oe or $(5x - 13)(x + 3) = 0$ oe			M1 correct method for solving their 3-term quadratic – either by formula, completing the square or factorising. If the quadratic is incorrect then working must be shown. Allow equivalent factorisations e.g. $(15y - 3)(y - 3) = 0$ By factorising: brackets must expand to give 2 out of 3 correct terms By formula: correct substitution into fully correct formula (allow 1 sign error). By completing the square: must see e.g., $5\left(y - \frac{8}{5}\right)^2 \pm \dots = 0$ May be implied by $x = 2.6$ and $x = -3$ or $y = 0.2$ and $y = 3$
	$[x =]3 - 2 \times "0.2"$ and $[x =]3 - 2 \times "3"$ or $[y =]\frac{3 - "2.6"}{2}$ and $[y =]\frac{3 - "-3"}{2}$			M1 substituting their two x values into either equation leading to values for y or vice versa (not dependent on any previous M marks) e.g. $4x^2 - "0.2" = 27$ leading to $x = \dots$ and $4x^2 - "3" = 27$ leading to $x = \dots$ or $4("2.6")^2 - y^2 = -27$ leading to $y = \dots$ and $4("-3")^2 - y^2 = -27$ leading to $y = \dots$ This mark can be implied by correct values (if no working seen). This mark can be implied by both correct pairs of values. If values are incorrect then working must be seen
		(2.6, 0.2) (-3, 3)		A1 dep on 3 M marks for both correct pairs of x and y values (oe e.g., $x = \frac{13}{5}, y = \frac{1}{5}$ and $x = -3, y = 3$) NB These do not need to be written as coordinates

11	(a)	$\{y: 0 \leq y \leq 9\}$	2	B2 for $\{y: 0 \leq y \leq 9\}$ or $[0, 9]$ condone $0 \leq y \leq 9$ but not $0 \leq x \leq 9$ (If not B2 then B1 for $0 < y < 9$ or $0 \leq y \dots$ or $\dots y \leq 9$) Allow f or f(x) for y
	(b)	-1	1	B1 Allow $x \neq -1$ but not $y \neq -1$
	(c)	f(0) = 3	2	M1 for f(0) = 3 A1 cao
	(d)	$xy + y = 3x - 1$ or $xy + x = 3y - 1$	4	M1 For a correct expression. M1 Collect all their x (or y) terms on one side (must be more than one) Allow 1 sign error. Condone both sides being over x or y eg $\frac{y+1}{x} = \frac{3x-xy}{x}$
		$y+1 = 3x - xy$ $x+1 = 3y - xy$ or $-y-1 = -3x + xy$ $-x-1 = -3y + xy$		M1 Isolating term in x (or y) ie taking x (or y) out as common factor so it only appears once in the equation
		$y+1 = x(3-y)$ $x+1 = y(3-x)$ or $-y-1 = x(y-3)$ $-x-1 = y(x-3)$		A1 oe e.g. $\frac{-x-1}{x-3}$ Must be in terms of x. No label required
		$[g^{-1}(x)] = \frac{x+1}{3-x}$
