A blank Cartesian coordinate system is shown. The x-axis is horizontal and the y-axis is vertical, intersecting at the origin labeled 'O'. The x-axis has tick marks labeled -4, -2, 2, 4, 6, and 8. The y-axis has tick marks labeled -2, 2, 4, and 6. A grid of lines is drawn at every integer unit interval. The axes end in arrows.

7 Alex produces and sells cans of drink.

The table shows the production costs for 80 000 cans of drink.

	Production cost (euros)
Manufacturing	31 000
Other	4 350
Total production cost	35 350

- (a) Calculate the manufacturing cost as a percentage of the total production cost.
Give your answer to one decimal place.

(2)

Alex sells each of the 80 000 cans of drink for £0.60

Using the exchange rate of £1 = 1.15 euros,

- (b) calculate the percentage profit that Alex makes.
Give your answer to 3 significant figures.

(4)

Alex borrows £20 000 on 1st January 2026 from a bank.

On 31st December each year, starting on 31st December 2026, the bank charges interest of 8.4% on the amount of money that Alex owes the bank.

This interest is added to the amount of money that he owes the bank.

Given that Alex does not repay any of the money that he owes the bank,

- (c) calculate how much money Alex owes the bank on 1st January 2028
Give your answer to 2 decimal places.

(2)

Alex also sells snacks.

The selling price for each snack, after tax is added, is £0.90

Given that the rate of tax is 20%

- (d) calculate the selling price for each snack, in £, before tax is added.
