Candidate Number

--	--	--	--	--

Monday 20 January 2020

Afternoon (Time: 1 hour 15 minutes)

Paper Reference **4CH1/2C**

Chemistry

Unit: 4CH1

Paper 2C

You must have:

Calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- Show all the steps in any calculations and state the units.
- Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Information

- The total mark for this paper is 70.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

Answer ALL questions.

1 This question is about elements, compounds and mixtures.

(a) Name the element that burns with a lilac flame. (1)

(b) Name the technique used to separate the mixture of colours in black ink. (1)

(c) The box gives the names of some substances.

air	bromine	magnesium	neon	sodium chloride	sulfur
-----	---------	-----------	------	-----------------	--------

Choose substances from the box to answer these questions.

(i) Identify the compound. (1)

(ii) Identify the mixture. (1)

(iii) Identify the non-metal element that is a solid at room temperature. (1)

(Total for Question 1 = 5 marks)

2 Crude oil is a mixture of hydrocarbons.

(a) Name the process used to separate crude oil into fractions.

(1)

(b) Give one use of the kerosene fraction.

(1)

(c) One of the hydrocarbons in the refinery gas fraction is an alkane with the structural formula $\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_3$

(i) Give the name of this alkane.

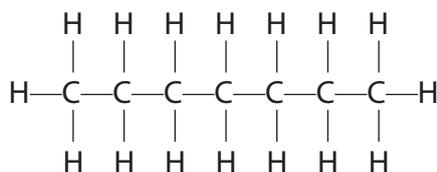

(1)

(ii) Calculate the relative molecular mass (M_r) of this alkane.

(1)

$M_r = \dots\dots\dots$

(d) One of the alkanes in the gasoline fraction has the displayed formula

(i) Determine the molecular formula of this alkane.

(1)

(ii) Give the general formula for the alkanes.

(1)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(e) Catalytic cracking is used to convert long-chain alkanes into shorter-chain alkanes.

(i) Name the catalyst used in catalytic cracking. (1)

.....

(ii) Explain why it is necessary to convert long-chain alkanes into shorter-chain alkanes. (2)

.....

.....

.....

.....

.....

.....

(f) Catalytic cracking also produces alkenes.

$C_{11}H_{24}$ can undergo cracking to give pentane (C_5H_{12}) and two different alkenes.

Complete the equation for this cracking reaction. (2)

(Total for Question 2 = 11 marks)

3 This question is about copper and its compounds.

(a) Copper is a metal used for electrical wiring.

Explain why copper is a good conductor of electricity.

(2)

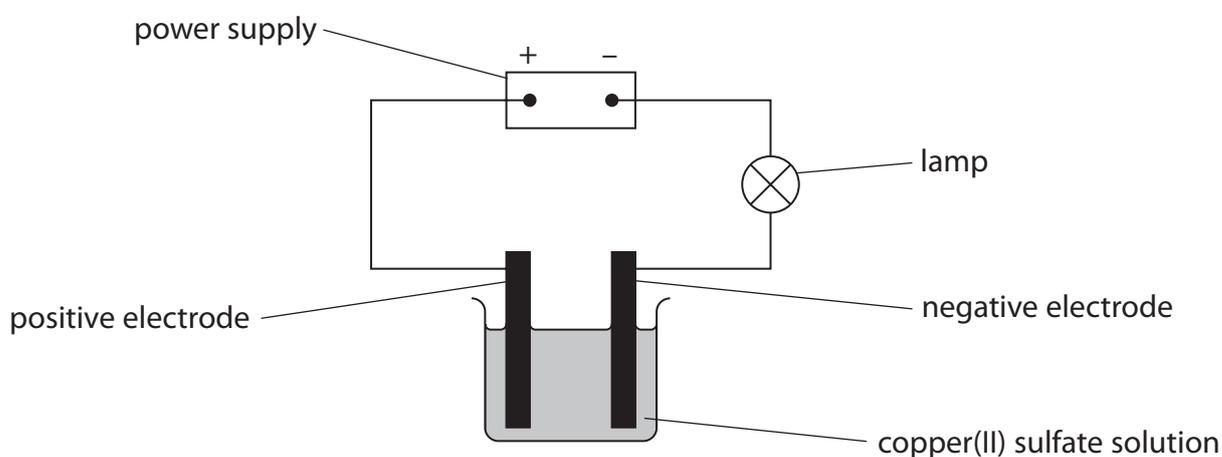

.....

.....

.....

.....

(b) This apparatus is used to investigate the electrolysis of copper(II) sulfate solution with graphite electrodes.

Copper forms at the negative electrode and oxygen forms at the positive electrode.

(i) State what would be observed at each electrode.

(2)

negative electrode

positive electrode

(ii) The ionic half-equation for the reaction at the negative electrode is

State why this is a reduction reaction.

(1)

.....

.....

(iii) Explain why the copper(II) sulfate solution becomes paler blue during the electrolysis. (2)

.....

.....

.....

.....

(c) When hydrated copper(II) sulfate crystals are heated, anhydrous copper(II) sulfate forms.

A mass of 12.5 g of hydrated copper(II) sulfate crystals is heated in a crucible until all the water of crystallisation is removed.

A mass of 8.0 g of anhydrous copper(II) sulfate forms.

Show by calculation that the formula of hydrated copper(II) sulfate is $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$

[M_r of $\text{CuSO}_4 = 159.5$ M_r of $\text{H}_2\text{O} = 18$]

4 A student investigates the reaction between sodium hydroxide solution and dilute sulfuric acid. He does a titration to find the concentration of the sulfuric acid.

This is his plan for the titration. There are some mistakes and omissions in his plan.

- rinse a conical flask with the sodium hydroxide solution
- use a measuring cylinder to measure out 25 cm^3 of the sodium hydroxide solution and add it to the conical flask
- add a few drops of methyl orange indicator to the conical flask
- rinse a burette with water and then fill it with the sulfuric acid
- add the acid from the burette to the conical flask until the indicator changes colour at the end-point of the titration
- record the final burette reading

(a) Give the colour change of the methyl orange indicator at the end-point. (2)

from to

(b) Describe four changes that the student could make to improve his plan. (4)

(c) The student then does the titration correctly.

He finds that 16.70 cm^3 of the dilute sulfuric acid neutralises 25.0 cm^3 of sodium hydroxide solution of concentration 0.200 mol/dm^3

The equation for the reaction is

Calculate the concentration, in mol/dm^3 , of the sulfuric acid.

(3)

concentration of sulfuric acid = mol/dm^3

(Total for Question 4 = 9 marks)

5 Oxygen can be prepared from hydrogen peroxide using a catalyst.

(a) Which is a correct statement about oxygen?

(1)

- A it burns with a squeaky pop
- B it relights a glowing splint
- C it turns blue litmus red
- D it turns limewater milky

(b) Explain how a catalyst increases the rate of a reaction.

(2)

.....

.....

.....

.....

(c) The equation for the preparation of oxygen from hydrogen peroxide is

This equation can also be written using displayed formulae to show all the covalent bonds in the molecules.

The table gives the bond energies for these bonds.

Bond	H—O	O—O	O=O
Bond energy in kJ/mol	463	143	498

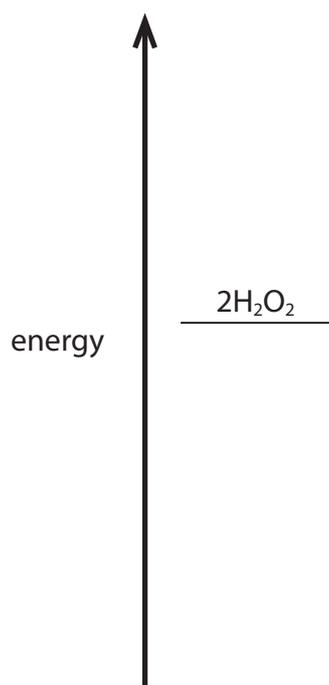

- (i) Use the values in the table to calculate the enthalpy change, ΔH , for the reaction.
Include a sign in your answer.

(3)

$\Delta H = \dots\dots\dots$ kJ

- (ii) Complete the energy level diagram to show the position of the products and the enthalpy change, ΔH , for the reaction.

(2)

(Total for Question 5 = 8 marks)

6 Ethanol, C_2H_5OH , can be manufactured from ethene and steam using a phosphoric acid catalyst.

(a) (i) State the temperature and pressure used in this manufacturing process. (2)

temperature

pressure

(ii) Draw the displayed formula of ethanol. (1)

(b) Ethanol burns in a plentiful supply of air to form carbon dioxide and water.

(i) Give the chemical equation for this reaction. (2)

(ii) When the air supply is limited, incomplete combustion occurs and carbon monoxide forms.

State why carbon monoxide is poisonous to humans. (1)

(c) When ethanol reacts with ethanoic acid, an ester forms.

Give the name of this ester. (1)

(c) When magnesium nitrate is heated, magnesium oxide, nitrogen dioxide and oxygen form.

The equation for the reaction is

(i) What is the name for this type of reaction?

(1)

- A addition
- B combustion
- C decomposition
- D neutralisation

(ii) Calculate the **total** volume, in dm^3 , of gas produced at rtp when 7.7 g of magnesium nitrate completely reacts.

[Assume that the molar volume of a gas at rtp is 24 dm^3]

[M_r of $\text{Mg}(\text{NO}_3)_2 = 148$]

Give your answer to two significant figures.

(4)

total volume of gas = dm^3

(Total for Question 7 = 15 marks)
