Pearson Edexcel International GCSE (9–1)

Tuesday 11 June 2024

Morning (Time: 1 hour 15 minutes)	Paper reference	4CH1/2C
-----------------------------------	--------------------	---------

Chemistry

UNIT: 4CH1

PAPER: 2C

<p style="font-weight: bold;">You must have:</p> Calculator, ruler	Total Marks
--	-------------

### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- Show all the steps in any calculations and state the units.

### Information

- The total mark for this paper is 70.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

**Answer ALL questions.**

**Some questions must be answered with a cross  $\boxtimes$ . If you change your mind about an answer, put a line through the box  $\boxtimes$  and then mark your new answer with a cross  $\boxtimes$ .**

**1** Use the Periodic Table to answer these questions.

(a) (i) Give the name of the element with atomic number 16 (1)

(ii) Give the name of the element with relative atomic mass 9 (1)

(iii) Give the name of the element in Group 3 and Period 2 (1)

(iv) Give the electronic configuration of an atom of silicon. (1)

(b) Explain, in terms of electron configuration, why sodium is more reactive than lithium. (3)

2 Structures made of iron can rust.

(a) (i) Name the two substances that cause iron to rust.

(2)

1 .....

2 .....

(ii) State a barrier method that prevents rusting.

(1)

.....

(b) Explain how sacrificial protection prevents the rusting of iron.

(2)

.....

.....

.....

.....

**(Total for Question 2 = 5 marks)**

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

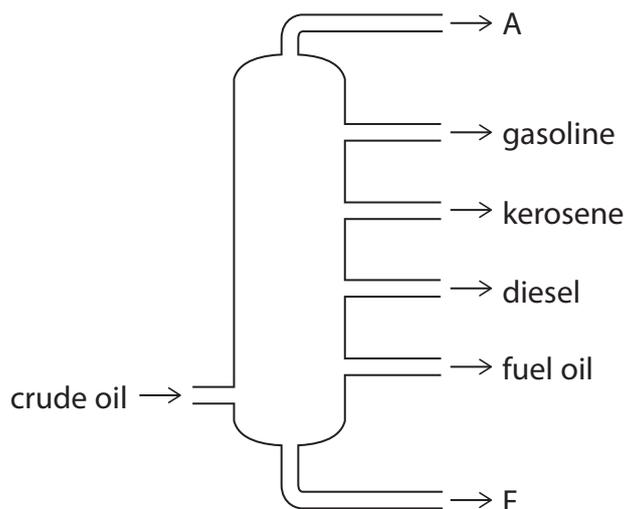

.....

.....

.....

3 The diagram shows the separation of crude oil into fractions.

(a) Give the name of fraction A and the name of fraction F.

(2)

fraction A

fraction F

(b) One of the fractions is kerosene.

(i) Give one use of kerosene.

(1)

(ii) Describe how kerosene can be obtained from crude oil.

(3)

(c) Catalytic cracking is a process used to break down fractions containing long-chain molecules.

(i) Give the name of the catalyst and the temperature used for catalytic cracking. (2)

catalyst

temperature

(ii) Explain why catalytic cracking is useful. (3)

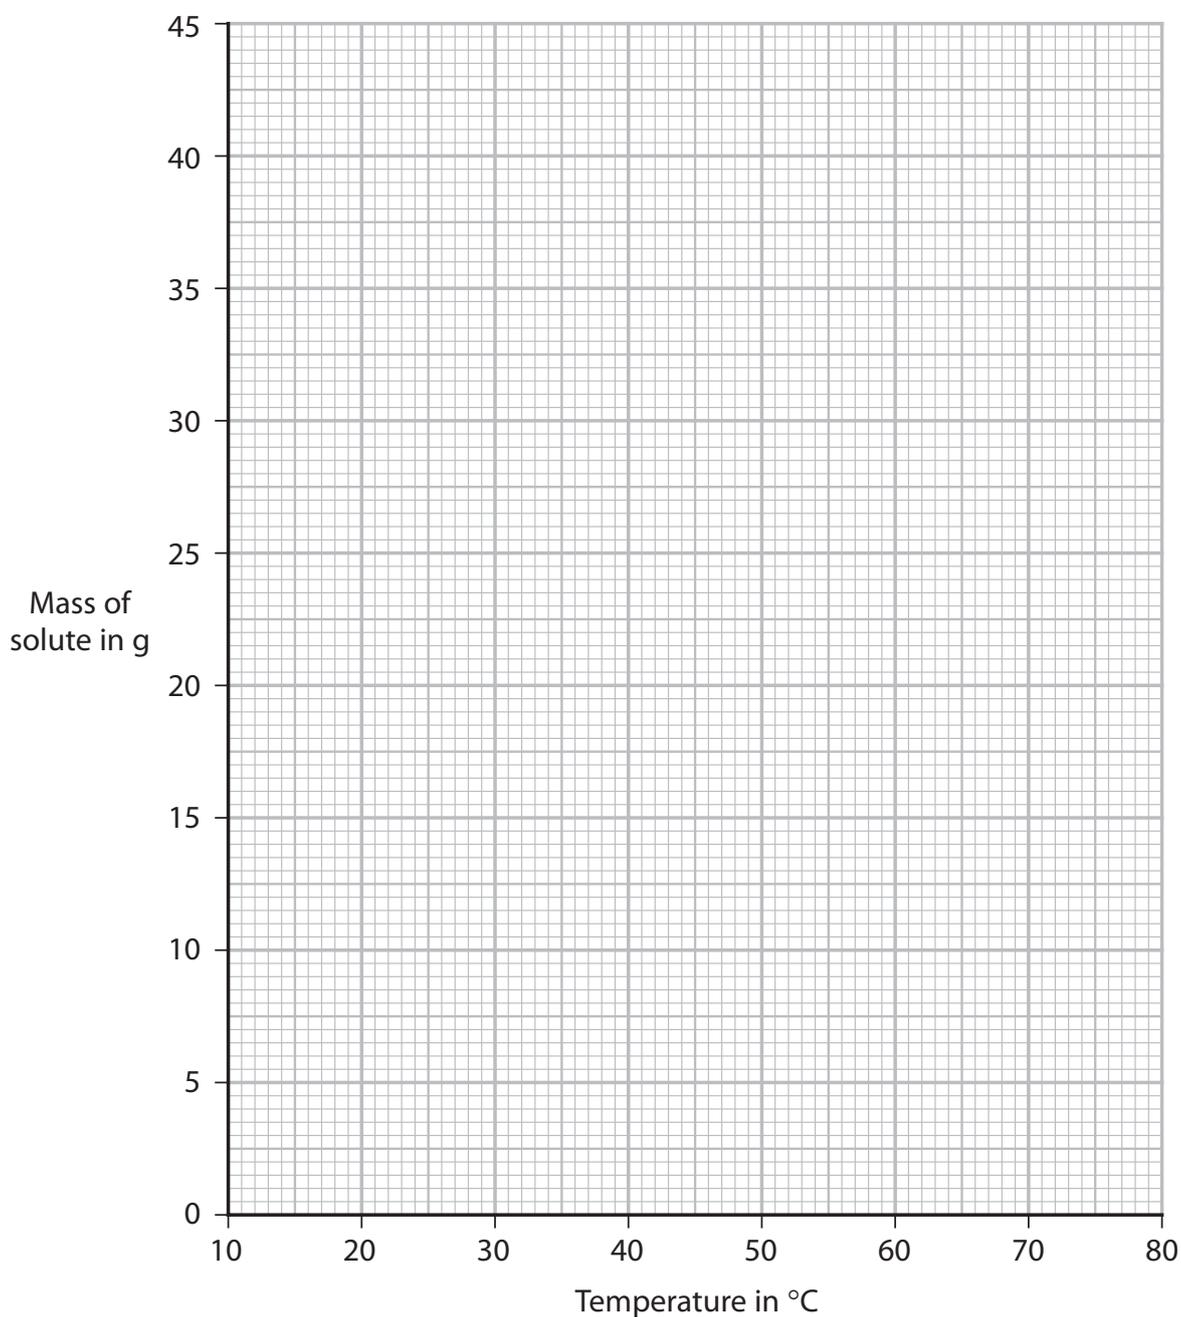

(Total for Question 3 = 11 marks)

- 4 The table shows the maximum mass of potassium nitrate ( $\text{KNO}_3$ ) and the maximum mass of sodium nitrate ( $\text{NaNO}_3$ ) that dissolves in  $25 \text{ cm}^3$  of water at different temperatures.

<b>Temperature in <math>^\circ\text{C}</math></b>	10	25	40	60	75
<b>Mass of potassium nitrate in g</b>	5	10	16	28	39
<b>Mass of sodium nitrate in g</b>	21	23	26	31	35

- (a) (i) Plot the data for potassium nitrate and for sodium nitrate on the grid. (2)
- (ii) Draw and label a curve of best fit for  $\text{KNO}_3$  and for  $\text{NaNO}_3$  (2)

- (b) The graph shows the temperature at which the maximum mass dissolved is the same for each solute.

Determine this temperature.

(1)

temperature = ..... °C

- (c) Use your graph to calculate the solubility, in g per 100 g of water, of sodium nitrate at 30 °C.

[1.0 cm<sup>3</sup> of water has a mass of 1.0 g]

(2)

solubility of sodium nitrate in g per 100 g of water = .....

- (d) 25 cm<sup>3</sup> of a saturated solution of potassium nitrate is cooled from 50 °C to 20 °C.

Use your graph to determine the mass, in grams, of potassium nitrate that crystallises.

Show your working on the graph.

(3)

mass = ..... g

5 Methanol,  $\text{CH}_3\text{OH}$ , is the first member of the homologous series of alcohols.

(a) Give two characteristics of a homologous series.

(2)

1 .....

.....

2 .....

.....

(b) Methanol is heated with potassium dichromate(VI) and one other reagent.

The methanol is oxidised to methanoic acid,  $\text{HCOOH}$

(i) Give the formula of the other reagent.

(1)

.....

(ii) Give the colour change that occurs during the reaction.

(2)

from ..... to .....

(iii) Draw the displayed formula for methanol and for methanoic acid in the boxes.

(2)

methanol	methanoic acid

DO NOT WRITE IN THIS AREA

(c) Methanol reacts with methanoic acid to form an ester.

Complete the equation for this reaction.

(1)

(d) The structural formula of an ester is  $\text{CH}_3\text{COOCH}_2\text{CH}_2\text{CH}_2\text{CH}_3$

(i) What is the name of this ester?

(1)

- A butyl ethanoate
- B butyl methanoate
- C ethyl butanoate
- D methyl butanoate

(ii) Deduce the molecular formula of this ester.

- 6 A scientist reacts lead(II) nitrate solution with sodium bromide solution.

This is the equation for the reaction.

- (a) Describe how the scientist could obtain a pure dry sample of lead(II) bromide ( $\text{PbBr}_2$ ) from the reaction mixture.

(3)

.....

.....

.....

.....

.....

.....

- (b) The scientist reacts an excess of lead(II) nitrate solution with  $25 \text{ cm}^3$  of sodium bromide solution of concentration  $2.0 \text{ mol/dm}^3$ .

- (i) Show that the amount of sodium bromide used is  $0.050 \text{ mol}$ .

(1)

- (ii) Show that the maximum theoretical mass of lead(II) bromide is approximately  $9 \text{ g}$ .

[for  $\text{PbBr}_2$   $M_r = 367$ ]

(iii) Give the half-equation that occurs at the negative electrode.

(1)

(d) Bromine forms at the positive electrode.

This is the half-equation for the reaction at the positive electrode.

(i) State what is observed at the positive electrode.

(1)

(ii) State why the half-equation represents an oxidation reaction.

7 This question is about hydrogen chloride (HCl).

Hydrogen chloride is a covalent compound.

(a) State, in terms of electrostatic attraction, what is meant by a covalent bond.

(2)

.....

.....

.....

.....

(b) When hydrogen chloride gas is dissolved in an organic solvent, the hydrogen chloride remains a covalent molecule.

When hydrogen chloride gas is dissolved in water, ions are formed.

Explain what happens when dry blue litmus paper is dipped into separate samples of each solution.

(4)

- (c) In the presence of ultraviolet radiation, hydrogen reacts with chlorine to form hydrogen chloride.

This is the equation for the reaction.

The table shows the bond energies.

<b>Bond</b>	H—H	Cl—Cl	H—Cl
<b>Bond energy in kJ/mol</b>	436	242	431

- (i) Calculate the enthalpy change ( $\Delta H$ ), in kJ/mol, for the reaction.

Include a sign in your answer.

(3)

$$\Delta H = \dots\dots\dots \text{kJ/mol}$$

- (ii) Draw a reaction profile for the reaction.

Label the reactants, the products,  $\Delta H$  and the activation energy ( $E_a$ ).

(4)

energy
